COMPETITIVE EDGE DYNAMICS

FALL 2012

IPSC IDPA LAW ENFORCEMENT
Cowboy Action USPSA

Cover Artwork by Rabbit Boyett

The NEW CED7000PRO Shot Timer!

In 2006 CED & DAA introduced the CED7000 Shot Timer, the smallest and by far most advanced timer of its time. In fact, to this day, the CED7000 still reigns supreme as the BEST-SELLING timer in the market.

Over the past two years, CED & DAA have again been joining forces together to bring the shooting community the next stage in Shot Timer evolution. Advances in chip and display technology have made it possible to elevate the simple Shot Timer to a complete comprehensive Match, Training, & scoring tool! We are proud to now introduce the all-new CED7000PRO.

The new CED7000PRO offers all the bells and whistles that we have come to expect of a top-of-the-line Shot Timer and so much more!

This new timer offers an ROF (Rate of Fire) tool that will clock full-auto rates of fire or just gauge how fast you can shoot your semi-auto. It offers a shot counter that keeps a record of how many rounds you shoot in a practice session, or in a whole season.

The CED7000PRO has a full color matrix LCD display, a customized quality keypad, aluminum front case, and a wide range of accessories. It even provides a "Simple Mode" option to make all these complex tools vanish, leaving only the basic delay and Par settings for those who like it "Old School"....

Like its predecessor, this new timer offers an optional add-on RF module that allows transmission of data to the CED BigBoard and CED Time Keeper. If that was not enough, the CED7000PRO is also the very first multilingual timer in the world, offering 5 different languages: English, German, Italian, Spanish, and French.

CED7000PRO \$199.95
CED7000PRORF \$214.95

Run Timer Mode

Shot/Session Counter

Rate Of Fire (ROF)

But, beyond all of these features, lies the real magic! The CED7000PRO is a fully functional match computer, allowing you to score and view results directly on the shooting line, and for up to 1,500 competitors!

You can create your own match on the timer itself or opt for the easier solution of using the dedicated website we have created: www.ced7000pro.com or WinMSS, to create your match data.

You can view stage and match results, verify lists directly on the timer's color display, or upload results from the timer to a PC and view them on the computer, allowing you the option of printing or emailing results to all!

The CED7000PRO is truly a revolutionary product, which will change the way we shoot and score IPSC, USPSA, IDPA, and Steel matches forever!

The Match Mode

In the "Create New" option, you can create a match, naming it, adding stages to it by assigning available points to each (and bonus points for disappearing targets, if needed), and enter all participating shooters. Each shooter is assigned a starting number, placed in a squad, assigned a Division, Category, and a Power Factor. By selecting "Run Match", you choose a stage and a squad to be scored. The timer presents the list of shooters in that specific squad who have yet to shoot the stage, and shows the RO which shooter is up, who is on deck and who is in the hole. After the time is recorded and confirmed, the user enters the actual hits on each target by using the scoring buttons on the keypad: A, C, D, M and P. Each keystroke is confirmed by a prominent visual and a unique sound, so you can keep your eyes on the targets as you walk by scoring them.

When all hits have been entered, you can use the optional IR printer to print out two copies of the stage verification.

Wireless IR Printing

CED7000PRO PRINTER \$149.95
Paper Rolls (2 Roll pk) \$1.95

The Steel Challenge Mode

The "Steel Challenge" Mode works much like the Match Mode in that you can create, run, modify, and view results of a Steel Challenge match. The 8 stages of the Steel Challenge are already created for you, and the timer runs the user through the 5 strings of each stage (or 4, in the case of Outer Limits), adding up the total and leaving out the slowest run. Of course the user can add time penalties as needed while you score.

Upload and Download

Uploading and downloading match data is done via the Mini USB, which also doubles as the charging port on the timer. Through this port, you can also upgrade to the latest timer firmware to ensure that you are always running the newest, best operating system.

The Steel Challenge Mode

CED7000PRO Connectivity Options

The CED7000PRO is so much more than a stand-alone device. It is the first timer to provide multiple connectivity options, allowing it to be used as a true match scoring or training device for the 21st century.

Using the mini USB port located at the bottom of the timer, one can quickly and easily connect to a PC and utilize its upload/download capabilities.

Matches and Steel Challenge events can be created and scored directly on the timer, and while this is sufficient for small group practice sessions, the limited keypad of the CED7000PRO makes this process too slow for larger scale use.

The CED7000PRO allows for both download of matches and upload of results to a PC by means of our customized upload/download tool, which is available free of charge on www.ced7000pro.com.

This tool makes it possible to use popular match creation and scoring software such as WinMSS, ezWinScore and ShootNScoreIt. There is even a version under development to be compatible with the M.O.S. System.

Using WinMSS or ezWinScore, you can create a match, including shooters, stages, squads, divisions etc, and download the information via our custom PC application to one or more timers – depending on your match setup. When scoring is complete, simply upload your results from each of the timers back to WinMSS and view or print your match or training session results in minutes.

Working with this software does not require an internet connection.

ShootNScoreIt.com is an online IPSC/USPSA match system, which allows match directors to publish their competition results, manage shooter's information and track scores. Using the custom PC app, you can export the data file from your timer and upload it to ShootNScoreIt.com. The website then will update its records and present you with match results and stats.

For those not familiar with the advanced software solutions mentioned above, there is another handy and user-friendly online tool available for download/upload to the CED7000PRO. Use the online match creation tool provided on www.ced7000pro.com to create your match. Enter shooters information, create your stages and download the data directly to your CED7000PRO. Once scored, you can upload to the website, print match and stage results to PDFs which can be saved or emailed to your match participants. The site's tool does not however allow you to edit or save the match results you upload.

For a more detailed description of how these tools can be used to your best advantage, view the video tutorials and download the latest user manual available on www.ced7000pro.com.

We welcome any interest to create software links and tools for our CED7000PRO. We'd be happy to provide our SDK upon request for any future system integration. Please contact (osc@doublealpha.biz) should you wish to receive detailed integration information.

The CED7000PRO,

By Yael Dagan

When CED announced that they are going to introduce a new timer, I remember thinking to myself: "what more can they do with it?" The CED7000 I've had for years is still pretty good, and I was not sure what could be done to improve it... But it was obvious that this new CED7000PRO would find its way into my range bag soon enough! A gadget freak like me, I just had to get my hands on one and I was able to do just that at the World Shoot in Greece. I became a proud owner of one of the very first CED7000PRO timers.

Unmistakably larger than its predecessor, it took some time for me to switch over. I was just so comfortable and accustomed to my smaller CED7000, and with no pouch or silicone skin yet available for the PRO (back then, they are available now...), it just felt wrong for me to throw this new timer in my range bag without any protection. I was worried it could be dropped or damaged. So it took me a while to first use it. But boy, when I did – I never looked back!

While I was ROing at one of our local matches it was finally time to test the new CED7000PRO in action. The very first improvement that stands out is the LCD

color display and its size. The new display makes it so much easier to read the time off the display from a distance, and easily show it to the competitor who wishes to confirm their time. No longer do you have to squint at a small display – this one is much more visible, even in bright sunlight. Squad members commented right from the start on how very convenient the display was. And the colors just make all the difference for me! I find that things just stand out better in color.

As it was scheduled to be a full day on the range, I came prepared with my CED7000PRO fully charged, and found that even if that match had lasted another full day, I still wouldn't need to recharge it! We ran a 7 hours match with some 200 shooters with no need to find a charging spot, and I continued working with it for the next two practice sessions as well, before the battery indicator started turning yellow on me (again, kudos to the color display which makes it much clearer when you really need to recharge the timer).

Another excellent feature I enjoyed using is the large amount of memory this new timer has, scrolling through some 99 previous strings stored in its memory. This is a very handy feature and can be used for recording an entire practice session, or reviewing back to view shooter's performances even from a squad or two back!

The only negative feedback I heard regarding my new timer was that the start beep sound is still not as loud as some shooters would like. It is much the same as it was with the CED7000. I find it to be sufficient though, and had no problems with it, even with my double ear protection (ear-plugs and hearing protectors).

In practice sessions, the fact that the Shot Splits are all displayed one after the other on the screen is a great improvement to the scrolling option of the CED7000. Although, if you don't press "review", you might be confused, as the screen shows the splits from the last shot backwards.

Menu Navigation on the CED7000PRO is also one of the most noticeable improvements. Although there are many more options and features than before, one can find them easily and intuitively. In fact, I must confess that I have yet to read my user manual at all...

Overall, the product has a much better quality and finish than the older timer does. In comparison, the CED7000 feels a little like a child's toy. On the PRO, I find that the buttons are of a much better quality, and although small, are more responsive and easy to operate.

While I have not had any use yet for the Steel Challenge Mode – the Match Mode is amazing! It is a dream come true to be able to score shooters there and then on the line, and have immediate stage and even match results!

I've not yet used this in a real match, but had the chance to use it while practicing with some training partners, and we all just loved it! We entered our names, power factors and divisions directly into the timer. (It did take a few minutes to do on the limited keypad the timer has, and is sure to be much easier using the download capability from a PC) but, boy, it was worth the effort. The timer "called" each shooter in turn by name, and even told us who was up next. We could score each shooter's targets as soon as he was done, entering his hits target by target, or using the faster "auto complete" option by holding down the "A" key after entering all the other hits. We instantly had results for each stage! It really made a difference to our practice, and soon each shooter was paying much more attention to his shot placement and his points. A great training aide.

While I've not yet used all the upload/download capabilities of my new CED7000PRO timer, I have played with the link software, and find it to be intuitive and user friendly. The full integration with WinMSS makes this timer just perfect for IPSC match use. I think I may just have to get myself one of those cool IR printers too, so I can print out shooter's verify lists as I RO them through my stage. This timer certainly does take the game to a whole new level. All in all, once I started using my CED7000PRO, there is no turning back. And as someone who keeps careful notes of her improvements from practice to practice, this new timer has become a MUST HAVE item in all my training sessions.

The Smallest, Most Advanced Shot Timer EVER!

CED7000

The CED7000 shot-activated timer is the most technologically advanced timer in the world, yet as easy and intuitive to use as a TV remote! It features advanced programming options, custom backlight display, memory, built-in rechargeable battery, and a range of new features which make all other shot timers in its price range obsolete.

Size and Weight

The CED7000 is by far the smallest and lightest Shot Timer ever made. It weighs only 80 g (2.9 oz) - ideal for hanging around your neck or on your wrist, even when shooting. It is so light and compact - you won't even know it's there!

Dimensions: 100 x 47 x 17 mm (3.94" x 1.85" x 0.7").

Available in two models : **CED7000 \$119.95**
CED7000RF \$134.95

The CED7000RF model includes wireless remote capability that allows the CED7000 timer to be synchronized (wireless connection) to a CED BigBoard or CED Time Keeper for displaying results from 30 to 50 yards away from the host timer. The RF model is an optional upgrade that can be ordered at the original time of purchase or upgraded at a later date.

New Features and Functions:

- Memory storage/recall for review of 10 strings and an unlimited number of shots.
- Custom Par for single or multiple Par time settings, with variable delay intervals and the first-ever hundredth-of-a-second setting.
- Dual forward and reverse Review function.
- Illuminated fully functional LCD display, showing total time, splits, shot number, Par and first shot time.
- Date and time displays, including alarm clock feature.
- Combined Comstock, Repetitive & Countdown Modes, and Auto-Start function.
- New Silent Operation for visual starts.
- Ambidextrous dual START & REVIEW Buttons.
- New "Spy Mode" for monitoring other shooters and visual starts.
- New "Stopwatch Mode" for use of the timer as a stopwatch to clock props and other shooters on the range.
- Optional RF remote capability for use with CED BigBoard and CED Time Keeper.
- Superloud start beep over 110 dB - the loudest in the industry with adjustable volume control.
- Rechargeable battery with low battery LCD indicator. Optional External Battery Pack.
- Wrist and neck band lanyards included.
- Universal Charger.

CED7000T

Due to popular demand, CED introduces the CED7000T Tactical Timer. This sleek "all-black" version of the CED7000 has been in hot demand by Law Enforcement & Military around the world for the past few years now. Due to its success, we have decided to offer it to all our customers. The CED7000T offers the same function and design as the original CED7000, but in a sleek all-black design. **CED7000T \$119.95**

CED7000 & CED7000PRO Accessories

Rotating Belt Clip

The custom belt clip incorporates a hinge system that allows the timer to be rotated upwards for comfortable viewing of the LCD display, and to be laid flat against the body when shooting or timing other shooters. The belt clip is designed to be used with broad competition-style belts. It can be used for either CED7000 or CED7000PRO Timers.

7000BC \$14.95

External Battery Pack

The External Battery Pack provides additional power to your CED7000 for up to 25 hours of normal use, while charging the internal battery at the same time. The battery pack holds 2 Alkaline "AAA" batteries available in most places. You can attach the battery pack directly to the timer or connect it by an accessory cable (included), allowing the battery pack to be stored in your pocket with the timer in use on the belt clip or neck lanyard.

7000BP \$11.95

Wrist Band

Carry your CED7000 or CED7000PRO Timers on your wrist, freeing both hands for shooting or running the stage. The wrist band is made of flexible, breathable Neoprene, and is adjustable to all wrist sizes. Can be used with or without the Silicone skins.

7000WB \$19.95

Color Skins

Protect and personalize your CED7000 or CED7000PRO Timers with custom-made Silicone skins in a wide array of bright colors, that give your timer a rubbery finish. This makes it more comfortable to grip and protects the timer from scratches and damage in case of falls. Available in red, orange, black, blue, green and yellow.

SKIN \$9.95 ea. / 3 for SKIN3PK \$24.95

PROSKIN \$9.95 ea. / 3 for PROSKIN3PK \$24.95

Accessories

Retractable Neck Lanyard Set

A retractable cylinder adds 76 cm (30") of additional length to the CED7000 or CED7000PRO Neck Lanyard. Perfect for extending the timer toward the shooter to arm's length and then retracting it safely back to your chest area while scoring targets, cleaning weapons, or loading magazines. The retractable cylinder can easily be attached to or removed from the neck lanyard, providing maximum flexibility of use. A handy belt clip on the backside of the cylinder is included.

7000RNL \$9.95

Auto Charger

For the traveling Range Officer, competition shooter, or simply for those last-minute charges while driving to the range, the Auto Charger is the perfect solution to charging your CED7000 or CED7000PRO Timers. Simply plug it into the cigarette lighter socket and charge your timer while driving to or from the range.

Specify model:

7000AUC \$10.95

7000PROAUC \$10.95

CED7000 & CED7000PRO Screen Protectors

Protect your valuable CED7000 or CED7000PRO Timer display with a Premium-quality UV-resistant, anti-reflective, anti-dirt and 99% transparent film. Protection for a lifetime from scratches, sun damage, dirt, fingerprints, and the daily wear and tear of usage. A superthin film, made in Japan, and used for many expensive touch-screen devices, the CED7000 or CED7000PRO Screen Protector is the answer to extending the life of your timer for years and years of use. The non-adhesive self-adhering surface is a snap to install or remove. Each set includes 2 pieces of screen protector film and a cleaning cloth to wipe off fingerprints and dirt.

7000SCRNPROT \$9.95

7000PROSCRNPROT \$9.95

Custom Case

Safely transport your CED7000 Shot Timer in this elegant custom carry case. Designed with dual-direction belt strap, detachable key ring, and carabiner, the CED7000 Carry Case can be worn on the belt, attached to a belt loop, or quickly snapped onto any range bag, backpack or other means of transport desired. The case features a front pocket with a quick-release Velcro cover to house the timer, and a zippered rear pocket to store battery pack, lanyards, and other accessory items. A custom metal 2-in-1 PDA pen is included with each case, adding a final special touch to this very functional product. Available in silver gray, royal blue, burgundy, hunter green, and black.

7000CASE \$16.95

CED8000! Now is the time!

CED introduces the most advanced shooting timer in the world for IPSC, IDPA, PPC, Bianchi, Cowboy, and Action shooting that is as easy to use as a mobile phone!

The CED8000 Timer features the largest backlit display, high-tech programming, memory recall, and a range of features that make all other timers obsolete! Easy to use and so compact and lightweight, that it will fit into your shirt pocket! 95x89x33 mm / 3.75" x 3.5" x 1.35".

The first shooting timer ever to offer preprogrammed NRA Bianchi and PPC events, in addition to Sportsman Challenge Countdown, European Field Shooting, Fixed time, Virginia Count, Repetitive, Combined Comstock, & Rapid Fire modes, all at a touch of a button. Storage memory maintains 10 strings in memory at all times, allowing easy review of results. Dual forward & reverse Review function and the longest recording capability (999.99 sec.) make the CED8000 perfect for any training or match use. Ideal for long courses of fire as often found in Cowboy & Action shooting venues.

The CED8000 offers private training use with the included custom earphone set and digital sensitivity adjustment for perfect results no matter what the range condition. The advanced PAR setting allows single or multiple Par & interval selections, all programmable. With date & time display, fixed, random, instant, or custom delay settings, low-battery indicator & warning, and a custom carry case, the CED8000 is in a league all by itself!

Available in two models :
CED8000 - \$149.00
CED8000RF - \$165.00

Requires 9V battery operation
(not included)

The CED8000RF model includes wireless remote capability that allows the CED8000 Timer to be connected (wireless) to a CED BigBoard or CED Time Keeper for displaying results up to 50 yards away from the linked timer. The RF model is an optional upgrade that can be ordered at the original time of purchase or upgraded at a later date.

CED2000 External Horn Set

CED2000 External Horn Set is ideal for use in any situation involving group participation, where a loud blasting sound is desired, including match shoot-offs, club, police, or military training. Perfect for "Man vs. Man" events or training large groups. Designed for use with CED Timers, the CED2000 External Horn can also function independently as well. The CED2000 comes with a wide range of features and its own mini tripod base. **CED2000 \$89.00**

Requires eight D batteries operation
(not included)

Features :

- Loud Siren Horn with over 25-yard range (with hearing protection on)
- Adjustable Table Tripod mount
- Power On/Off switch
- LED Power & Low Battery indicator lights
- Alkaline battery powered with battery holder included
- 9 ft. connection cable for timer link
- AC Input Jack (Optional AC Adapter available)
- Test / Self-use activation button
- CED Timer synchronization

AC Adapter for the CED2000

Designed to provide 110V AC or 220V connection for the CED2000 External Horn Set. (Must Specify 110V or 220V)

CED2/ACA \$9.95

Earphone Plug Set

(Note – The Earphones come included with the CED8000 Timer. It is listed here for replacement purposes only)

EPS \$7.95

CED BigBoard Display

The CED BigBoard is a large, remote LCD Display Board that provides synchronized connection to a host-linked timer, giving actual time as it is recorded up to 50 yards from the timer itself. Large enough to be seen from a great distance, the CED BigBoard is ideal for club, match, or spectator use. 370x175x45 mm / 14.6" x 6.9" x 1.75"

CEDBB \$169.00

Features :

- Extra-Large 4-segment LCD Display
- Power On/Off Switch
- 50-yard wireless range
- 9V battery operation (not included)
- Optional AC Adapter available
- Belt clip / table stand for easy attachment to wall or table display
- Custom Case for easy storage and protection included

CED7000RF, CED8000RF or CED7000PRORF / CED BigBoard Combo

When ordering either the CED7000RF or the CED8000RF Shot Timer along with the CED BigBoard at the same time, CED provides a savings off the retail purchase price. To receive this special combination price, the order must be placed using these special stock code references.

CED7000RF/BB \$275.00
CED8000RF/BB \$299.00
CED7000PRORF/BB \$355.00

CED Time Keeper

The CED Timer Keeper is designed for use in clubs, matches, or events where scoring is done separately from the Range Officer function. Has a compact "pager style" remote display unit that displays the number of shots, total time and splits up to 50 yards from the synchronized host timer (CED7000RF or CED8000RF). Now it is possible for a scorekeeper to have the time details instantly as they are occurring. Excellent for coaching & training purposes where monitoring progress is required. Instant confirmation of times and shots fired, remote scorekeeping capability, providing increased flexibility and efficiency. 70x50x26 mm / 2.75" x 2" x 1".

CEDTK \$49.00

Features :

- Power On/Off Switch
- Dual forward / reverse review function
- Up to 50-yard remote range from host timer
- Two AAA battery operation (not included)
- Swivel belt clip for easy attachment to clipboard or belt
- Power Down & Auto shutoff mode to conserve battery drain

CED M2 Chronograph

CED proudly introduces the CED M2 Chronograph System. Building on the original CED Millennium Chronograph, which became an industry standard in the past decade, the CED M2 Chronograph begins where its predecessor leaves off.

New advanced technology enabled us to DOUBLE the operating speed of the CED M2 chronograph incorporating a micro-controller that runs at 48 MHz while expanding the operation range from 50 fps to 7,000 fps. Memory storage has been expanded 500% from 220 velocities to over 1,000 stored velocities. Stored string size can range from a single velocity up to 500 velocities and up to 500 different strings. Expanded digital chip design now gives the CED M2 the ability of reading velocities at much lower light levels. On clear days, this means the ability to chronograph from early morning till almost sunset.

A new keypad has been designed in calculator-style layout. In fact, we have added a built-in calculator as well. Further, the CED M2 now includes a "Hi-Average" function which provides "one touch" calculation of the average of the three highest velocities in a string. This new function is ideal for calculating Power Factor at IPSC & IDPA matches. With the new built-in calculator, the results are easy and fast! In addition, the CED M2 Chronograph adds even more new features like Single function string removal, 2 ft. mounting bracket for ALL uses, the ability to recall specific strings from memory or to remove specific strings from memory, and a new USB interface. Now it is easier than ever to connect your chronograph to your PC and download your saved data into the newly designed and updated CED Data Collector software program.

CEDM2 \$199.00

Features of the CED M2 Chronograph System:

- Sleek, lightweight, and compact design
- Advanced software & digital circuitry = extremely fast performance!
- Over 1000 shot capacity with up to 500-string permanent memory
- Records velocities from 50 fps to 7,000 fps
- High, Low, Average, & Hi-Average velocity readings
- Extreme Spread & Standard Deviation
- Edit & Omit functions
- Built-in Calculator
- IPSC / IDPA Power Factor Function
- 10X Mode – records velocity in decimeters
- Meter or feet recording
- Voice Chip technology – Results can be heard as well as seen
- "Advanced Error Warning" system
- USB interface
- New Data Collector Software program included
- 9-Volt battery operation (not included)
- Operating Temperature range (0c to +50c)

Chronograph Accessories

The CED M2 and Millennium Chronograph, have a complete line of accessory and replacement parts available. There is no need to replace an entire chronograph system, as some brands require. If a specific part is damaged in use, in most cases it is available for purchase, saving the expensive cost of replacing the entire system.

Replacement Sensor

Packaged individually, each sensor comes with 20 ft. shielded cable attached.

CED M2 Replacement Sensor
M2002 \$36.95

CED Chronograph Main Unit

The main unit (CPU) for the Millennium & M2 Chronographs is available by itself as a replacement or as a second unit. The Millennium Chronograph CPU will hold up to 220 velocities, and the M2 Chronograph CPU will hold up to 1,000 velocities. For those who do large amounts of chronographing, an additional unit may be just the solution!

CED M2 Chronograph Main Unit
M2015 \$122.00

Infrared Screen Set

With incredible accuracy, the Patented Infrared Screen Set eliminates the need for sunlight when using the CED Millennium Chronograph system, and gives you the freedom to record velocities under any lighting condition, or if you choose, no light at all! Connects to the standard sensors that come with the CED Millennium Chronograph system, and uses its own AC power source (included) or optional NiMH battery pack. The Infrared Screen Set includes Infrared Screens, sidearms, AC Adapter, and instructions.

MC012 \$89.00

NiMH Rechargeable Battery Pack

Provides up to 8 hours of continuous field use for the Infrared Screen Set. Ideal for locations where AC electrical connections are not available. The "no-memory" Battery Pack can be recharged 500 to 1,000 times. Comes with complete Battery Pack, AC Charger, and connection cables. Instructions included.

(Note – The NiMH Battery Pack and Charger can also be used to power the CED2000 External Horn Set) **MC013 \$48.00**

Infrared Sidearm Replacement Set

Set consists of four sidearms, two of which include cable and jack connections for the infrared screens.

MC014 \$14.95

Replacement Skyscreen Set

The Replacement Skyscreen set includes two top screens and four sidearms.

MC003 \$21.95

Replacement 2 ft. Mounting Bracket

Custom designed for the CED Millennium Chronograph, this mounting bracket incorporates a central "swivel" arm with camera screw base, that allows the bracket to be folded in half to a maximum length of 13 inches for easy storage and use. (Bracket included in the CED Millennium Chronograph system set)

MC006 \$14.95

4 ft. Mounting Bracket

Custom designed for the CED Millennium Chronograph, this extended mounting bracket incorporates two 2 ft. brackets with a central connection system. Designed for use with a single tripod or table mount base.

(Note – The 4 ft. bracket is required when using the CED Millennium Chronograph to record velocities of archery arrows)

MC007 \$22.95

Table Mounting Plate

Custom designed for use with the CED Millennium Chronograph, this table mounting plate is made of heavy metal construction that provides a strong stable base for positioning the Chronograph mounting bracket and screens on any flat surface. Ideal to use when a tripod isn't practical.

MC010 \$22.95

Indoor Lighting Set

All chronographs require incandescent light, which is normally provided by the sun. However, when any chronograph is used indoors, additional lighting is required.

This indoor light set is custom designed to fit the CED Millennium Chronograph Skyscreen Arms. The strong metal frame provides additional protection for the custom light bulbs. Includes an on/off switch and custom 11.75" long bulbs that provide a full complete shooting window.

Not designed for use with the CED M2 Chronograph.

CED-SL36 Chronograph Tripod

The new CED-SL36 is a medium-weight Chronograph tripod, designed for normal chronograph use with pistol or rimfire rifles. 3-section, 30mm diameter aluminum construction, measuring 24.5" (62cm) folded and opening up to a maximum 67" (170cm) usage height. This solid constructed tripod features a 3-way & removable panhead with camera threaded connector, 2 leveling adjustments, a deluxe zippered carry case, and weighs almost 4 lbs. (1.7kg). A center gravity hook allows additional weight to be added for increased stability in use. An economical alternative to the CED1555 Professional Tripod, the CED-SL36 is value packed for its price!

SL36/MC001 \$42.95

CED1555 Professional Tripod

Weighing over 9 lbs., the CED1555 Professional Tripod is a true heavyweight! 3-section round aluminum tube frame, with an extension range from 21.75" to 61.25" (55.2cm - 155.5cm) and 28" (71cm) folded, this is one of the best professional tripods we have ever tested. 3-way & removable panhead, with leveling function, and all-metal construction, make this tripod the right choice for use in chronographing full-bore magnum loads. An excellent value at half the price of comparable brands, the CED1555 Professional Tripod is the one you need! Includes a deluxe carry case with zippered pocket and padded shoulder strap. Ground shipping only or surcharges may apply for air on this product.

CED1555 \$89.95

CED Mini Tripod

A solid aluminum frame, with extension legs, the CED Mini Tripod is the ideal companion for the on-the-move photographer or hobbyist. Compact at 5.5" folded (14cm) and weighing only 4 oz. (110g), this mighty mini extends from 4.75" (12cm) to 6.5" (16cm). A fully adjustable camera threaded head makes positioning any camera a simple breeze. Place the CED Mini Tripod anywhere that has 5" of flat surface and you are ready to shoot! The CED Mini Tripod is included with the purchase of the CED2000 External Horn Set, or can be purchased here separately.

- Auto Power Off Function
- Molded hard storage case / calibration weight / powder pan / batteries / AC Adapter included
- Power Requirements: 4 x AAA batteries (included)
- Compact Size: 10.5 x 15.5 x 3.5 cm (4.2" x 6.2" x 1.4")

CEDPES \$119.95

Important: Due to the wide range of unit weights and capacity, this digital scale is not designed for slow precise powder trickling.

SAXON 15-45x52 Zoom Spotting Scope

This innovative new design in a very compact zoom spotting scope has solved the problem of toting bulky scopes afield. The collapsible design has a 15-45x magnification and 52mm pull-out and push-in objective with fully multi-coated lens for greater clarity and light transmission. The large 52mm objective lens has exceptional light-gathering capabilities for better viewing in early or late light. Hunters, Shooters, and birders who travel off the beaten path will appreciate the rubber armoring and compact design that make it easy to stow in any range bag or back pack. The perfect all-around optical instrument! Includes mini table tripod and soft, zippered carry case. **SSS \$89.95**

4-in-one Multi Pen

The new CED 4-in-one Multi Pen provides four products in one great pen! The high-quality brass housing encompasses a smooth ballpoint pen and PDA stylus pointer. Twist one direction for ink and the other for the stylus. On the other end, a white LED light functions in steady stream or blinking action. The pen also includes a laser pointer that is great for presentations or for simply pointing out those "spur of the moment" needs. Uses three LR41 Button Cell batteries (included). **CEDMP \$15.95**

Sale \$12.95

Safety Precautions:

- LED and Laser light beams are harmful to the eyes. Avoid direct exposure at all times. Do not shine the light beams directly at any person or animal.
- Warning: Failure to follow and comply with all of the instructions specified herein may result in injury or loss of vision from hazardous laser light exposure.
- Keep it out of the reach of children!

CED Micro Pocket Bore Light

CED introduces the smallest most convenient Micro Pocket Bore Light ever! NOW, in a NEW model that uses a single "AAA" battery and produces a stronger brighter beam of light. A mere 4.5" (11cm) in length, Fiber optic light provides a high intensity beam of light for easy viewing of the bores of handguns, rifles and shotguns and more! Makes checking for leading, fouling, scratches, pits, and rust fast and easy. Great for safety checks and for lighting hard-to-get-at-areas. Ideal for regular firearms maintenance or for examining used guns prior to purchase. A useful tool for clear inspection under any condition. Exclusively designed and produced by CED, the Micro Pocket Bore Light comes with ON / OFF button & belt / bag attachment clip.

MPBL \$7.95

CED Long Neck Bore Light

CED's NEW "Long Neck" Bore Light extends in any direction. Light up those hard-to-get-at-areas, putting the light right where you need it! Truly flexible, this dynamic product provides a high intensity beam of light for those hard to reach locations. Makes easy viewing of barrels for rifles, shotguns, handguns, as well as action recesses, and magazine wells! Great for checking for leading, fouling, scratches, pits, or rust. In addition to its shooting related use, the CED Long Neck Bore Light is ideal for automobiles, electronics, drains, and all those tough corner niches that might be hiding something you need. Now in a NEW design and using a single "AAA" battery.

Measures 7.5" (19cm) in length with a full 5" (12.7cm) flexible neck.

LNBL \$9.95

CED "BigBoy" Countdown Timer

The CED "BigBoy" countdown timer for benchrest High Power, long-range, smallbore, and other competitive timed events, has one of the LARGEST LCD displays on the market. At 2.5" x 1.25" this functional Countdown timer can be easily seen! With one-second intervals up to 99 minutes and 59 seconds including both count up and count down functions, this great timer can be ordered in audible signal or inaudible as required by NRA High Power events. This unique timer includes an easel back for standing, a magnet for attaching to a steel surface, and a loop hook for hanging on any surface. Measures 3.125"H x 3.125"W x 0.625"D. Uses two AG13 button cell batteries (included).

BBCDT-A (With Sound) \$11.95

BBCDT-NA (No Audible Sound) \$11.95

CED Universal Countdown Timer

CED introduces the ultimate countdown timer for benchrest High Power, long-range, small-bore, and other competitive timed events. Unlike other timers on the market, the CED Universal Countdown timer features audible, non-audible, visual, and vibrating functions, all packaged into one! A large LCD display (1.25" x 0.75") can be pre-set in one-second intervals up to 99 minutes and 59 seconds with both count up and count down functions. Separate switches on the back allow the timer to be set to an audible signal or non-audible (NRA requirements for High Power), or to a flashing light, or to a vibration mode indicating when time has elapsed. It also includes an ON/OFF switch that saves battery consumption. The timer includes an easel back for standing the timer, a magnetic back for attaching it to a steel surface, and a belt clip for attaching it to the user. Measures 3.5"H x 2.25"W x 1.375"D. Uses one AAA Alkaline battery (not included).

UCDT \$14.95

CED Utility Knife

Don't ruin your expensive "tactical" folder on opening boxes, cutting cord, packing tape, or other daily chores, when you can have a fantastic-looking utility knife that uses a replaceable blade. The CED Utility Knife holds most contractor-grade and home-use blade sizes that are available at any hardware store. A hybrid of a quality pocket knife and functional utility knife, the CED Utility Knife features anodized aluminum / stainless steel construction, ergonomic styling and a belt clip for convenience.

The CED Utility Knife is a niche product designed for the masses. From the basic task of opening mail to the rigorous everyday abuse of the professional industrial trades, the CED Utility Knife truly is the universal product for everyone. Each CED Utility Knife comes packaged with its own Storage Pouch and Replacement Blade Kit. A great value!

CED Limited Edition Shooters Pendant

Add a special touch to your range bag, pistol case, brief case, or purse. The CED Shooters Pendant, beautifully designed in intricate detail, will add a "touch of class" to any shooter's wardrobe. Made of solid brass with a finely brushed nickel (pewter-looking) finish, this limited edition collector's item measures 2.5" (6cm) wide by 1.5" (3.5cm) tall (includes clasp & chain). While supplies last!

LESP \$5.95

DAA Mag Brush

The DAA Mag Brush is designed with a slightly longer stem, to allow easier access through those long 170mm tubes. The handle is constructed of firm mold injected nylon, and the core wire of 2.2mm ensures this brush will not bend easily, providing a long service life.

The brush itself, can be screwed off the handle and replaced, if the bristles become worn, soiled, or old.

A simple and handy tool for cleaning magazines. A must have item in every range bag.

DAAMBRUSH \$9.95

NexTORCH

The T6A Tactical flashlight from NexTORCH is made from CNC-machined aerospace-grade aluminum T6061, with hard anodized type III finish to meet military specifications. Waterproof to 10 meters in depth, this fine, patented product will withstand the rigors of tactical use. Surpassing similar products costing well over \$100.00, the T6A offers the BEST value on the market today!

The powerful 3-watt high super pressure pure xenon gas-filled bulb with tungsten filament provides 2 to 4 times more efficiency than a regular incandescent bulb with excellent penetrating capability in foggy weather. The T6A provides up to one hour of continuous use producing 80 lumens of light. It features both ON / OFF and momentary ON use by pressing the sealed end-cap button. Measures 134mm x 27mm x 34mm (head diameter) & uses two NT123A Lithium batteries (included).

Z3 Torchlight

Introducing the NexTORCH Z3 Tactical Torchlight!

The Z3 Tactical flashlight from NexTORCH, like its brother, the T6A, is made from CNC-machined aerospace-grade aluminum T6061, with hard anodized type III finish to meet military specifications. Waterproof to 10 meters in depth, this fine, patented product will withstand the rigors of tactical use. Surpassing similar products costing well over \$100.00, the Z3 offers the BEST value on the market today in LED Torchlights.

No matter how advanced the technology is, Tungsten filament can be broken in super-high temperatures or severe vibration situations. This is not the case with the super-bright LED. It can never be broken, because it has no Tungsten filament at all! The powerful 3-watt LUXEON EMITTER LED provides 60 lumens with a running time of up to 2.5 hours of continuous use. It's designed with an invariable circuit, which drives the battery capacity at 100% level, while maintaining LED brightness until the batteries are completely depleted.

It features both ON / OFF and momentary ON use by pressing the sealed end-cap button. Measures 134mm x 27mm x 33mm (head diameter) & uses two NT123A Lithium batteries (included).

CED Shooting Caps

"The Edge You Need To Succeed" has become a slogan for CED products.

The competitive edge is built-in to every product designed by the CED team. CED is proud to offer two new CED caps, each with a distinctive look and each made of superb 100% cotton twill fabric.

Each CED cap is constructed with a strong, curved & extra-long (8cm) brim that is designed with the competitor in mind! Each cap has an adjustable fabric strap for sizing including a brass buckle. CED caps come in two distinctive designs and colors, each sporting extensive embroidery to make these caps unique and sharp looking.

Specify Navy or White color / design when ordering.

CEDCAP \$9.95

CED Wrist Bands

There is nothing worse than a poor draw of your weapon due to wet, sweaty hands, which often result in a poor grip and draw. Let's face it, most of the shooting season is during the hot, humid days of summer. For the competitive sportsman, many hand creams provide moisture-free hands, but they do nothing for the sweat that runs down the arms. CED Wrist Bands are designed to stop the perspiration from reaching the hands. Made of densely knitted 100% cotton, CED Wrist Bands are designed slightly larger and more dense than normal sweat bands, providing added protection on those hot, humid summer days of shooting! They are great for other sports as well, like tennis, golf, basketball, soccer, and running.

Packaged as a pair, the CED Wrist Bands can be machine washed and dried for fast turnaround use.

Available in Red, Blue, Black or White.

Deer Harness

Unless you hunt from your pickup or ATV, you know what's involved to get your deer out of the woods. True deer hunters get back there, on foot, knowing that the chances of bagging a real trophy increase when they walk that "extra mile." Designed by a hunter who does just that, our patented DEER HARNESS makes that long drag back to camp easier.

The DEER HARNESS, fully adjustable for buck or doe, raises the head, while also securing the front legs. The unique patented design "streamlines your deer," making it glide over obstructions. With our product, logs, brush, rocks, or other types of barriers are no longer a source for "hang ups," which in the past made dragging a deer both strenuous and frustrating. We don't claim to eliminate the long drag back to civilization, we just make it easier. Compact, it fits in a pocket or backpack.

Taxidermists tell us our design helps preserve the cape, thereby ensuring a better-looking mount.

3GM – Shooting Techniques of the Grand Masters

3GM brings you the experience and know-how of three of the top Grand Masters in the sport today: Max Michel, Saul Kirsch, and Angus Hobdell. Each shares with the viewer his technique in topics like stance and balance, recoil control, accuracy, the draw, specialty draws, reloads, and transition between positions.

The goal of this production is to highlight the differences between the techniques used by these champions. Watch, learn, and choose which technique works best for you. For added interest, Max coaches with a Limited gun, Saul uses his Open STI, and Angus displays his skills with his Production CZ.

Max Michel has been an IPSC shooter for 16 years. He started young, and was a GM at the record-setting age of just 15! Max has risen to the very pinnacle of our sport, being crowned USPSA Open Nationals Champion in 2004 and 2005, winner of the 2005 Steel Challenge, and winner of over 20 USPSA Area championships. Max is an accomplished instructor and coaches shooters across the USA.

Angus Hobdell is a veteran of the sport, and a top International contender with over 20 years' experience. His shooting resume includes the European Champion title, 4 times American Handgunner World Shoot-Off champion, 3rd place at the last World Shoot, and winner of numerous USPSA Area championships. Angus is Captain of Team CZ USA.

Saul Kirsch began his shooting career more than 20 years ago as an Olympic rifle shooter. He has been competing and winning in IPSC for over 10 years. His achievements include 3 times winner of the European Steel Challenge, winner of over 50 Level III matches, and top 5 ranking at the World Shoot. Saul is a sought-after instructor and author of several books on the sport.

3GM2 – More Shooting Techniques of the Grand Masters

3GM2 brings you more of the experience and know-how of three of the top Grand Masters in the sport today: Max Michel, Saul Kirsch, and Angus Hobdell. They are back in this sequel, to teach you the more advanced technical skills, including target transitions, kneeling and prone positions, shooting around barricades, strong and weak hand shooting, shooting on the move and shooting swingers.

The goal of this production is to highlight the differences between the techniques used by these champions. Each was filmed separately, in different locations. Watch, learn, and choose which technique works best for you. For added interest, Max coaches with a Limited gun, Saul uses his Open STI, and Angus displays his skills with his Production CZ.

Max Michel has been an IPSC shooter for 16 years. He started young, and was a GM at the record-setting age of just 15! Max was crowned USPSA Open Nationals Champion in 2004, 2005 and 2007, winner of the 2005 and 2007 Steel Challenge, and winner of over 25 USPSA Area championships. Max is an accomplished instructor and coaches shooters across the USA.

Saul Kirsch began his shooting career more than 20 years ago as an Olympic rifle shooter. He has been competing and winning in IPSC for the past 10 years. His achievements include 4 times winner of the European Steel Challenge, winner of over 50 Level III matches, and top 5 ranking at the World Shoot. Saul is a sought-after instructor and author of several books on the sport.

Angus Hobdell is a veteran of the sport, and a top International contender with over 20 years' experience. His shooting resume includes the European Champion title, 4 times American Handgunner World Shoot-Off champion, 3rd place at the last World Shoot, and winner of numerous USPSA Area championships. Angus is Captain of Team CZ USA. Running time: 210 min

3GM2DVD \$49.95

Master Class I DVD

In Master Class I, you join Saul Kirsch as he coaches a group of eight shooters in Årjäng, Sweden. This DVD was filmed during the actual full day of coaching.

Saul covers many of the most important basic technical skills required to excel in the sport of Practical Shooting. Topics covered include accuracy in pistol shooting, recoil control, the "high-ready" position and gun presentations, drawing from the holster, specialty draws and turns, reloading, and the first steps to shooting while exiting a position. In addition, Saul explains the basics of IPSC scoring and understanding the hit factor and point system.

Each topic is presented clearly with detailed explanations by Saul, and then followed by some dry-fire and live-fire drills. You can even strap on your rig and dry-fire along with the class, if you like, but make sure your gun and magazines are unloaded!

Edited into the explanations are some brief scenes of top shooters in action at the 2007 USPSA Open and L10 Nationals. (180 minutes running time)

MC1DVD \$39.95

Master Class II DVD

In Master Class II, Saul Kirsch continues his group coaching, covering many of the most important advanced technical skills for Practical Shooting, including the kneeling and low crouching position, shooting strong hand and weak hand, exiting shooting positions, moving between and entering into shooting positions, shooting on the move and shooting swingers. In addition, on each topic, Saul gives advice and guidance on how best to train to improve these specialized skills.

As in Master Class I, each topic is presented clearly with detailed explanations followed by some dry-fire and live-fire drills. Strap on your rig and dry-fire along with the class, if you like. This special DVD includes some brief scenes of top shooters in action at the 2007 USPSA Open and L10 Nationals. (180 minutes running time)

MC2DVD \$39.95

Mastering the Mental Game DVD

Mastering the Mental Game is a DVD containing more than two hours of a live lecture given by world-class shooter and coach, Saul Kirsch, in Årjäng, Sweden. In this presentation, Saul explains some of the more difficult, critical aspects of the mental side of Practical Pistol Shooting. In his friendly and easily understood style, he brings clarity to complex topics, such as:

The Mental Process of Peak Performance

In this section Saul analyzes the basic thought process that governs our every action and is essential to achieving success under pressure; how the Conscious, Subconscious and Self-Image interact with one another to influence the outcome of our match performance. Saul explains how each element can be improved and developed to achieve a better competition result.

Managing Match Stress

As someone who has experienced match stress firsthand, Saul teaches how to meet the pressure head on and triumph over your fears and doubts. He shares some proven techniques which will allow you to lower or raise your stress level, as needed, to keep you in your "zone of peak performance."

Stage Visualization and Tactics

Building on the previous topics, Saul shares his techniques on stage preparation, visualization routines, and tactics. He explains how to recognize the tactical options on a stage, weigh the alternatives and choose the best solution for you. Saul includes examples of his personal tactical experiences in major matches around the world, and teaches as only one who has "been there and done that" can. (135 minutes running time)

Matt Burkett's Practical Shooting Series

Matt's Practical Shooting series currently has a number of exciting titles, including: Practical Shooting Vol. 1-3 (2-disc set), Vol. 4 - How to Shoot Faster, Vol. 5, Winning IDPA Techniques, Vol. 6, The AR-15 (2-disc set), Vol. 7, How to Practice, and Vol. 8, Shotgun Mastery. (DVD Vol. 1-3 features an interview with Brian Enos.)

Practical Shooting Handgun Techniques Vol. 1-3. (2-disc set)

The original Matt Burkett Practical Shooting VHS tapes, vol. 1-3, are now available on a two-disc DVD set, which is

over 155 minutes long. Watch and learn as professional shooter Matt Burkett teaches his student (Kevin Elpers) the techniques required to be a successful IPSC handgun shooter. Everything is covered: Safety, Equipment Choice and Set-up, Stance, Grip, Eye Dominance, Sight Information, Weak/Strong Hand, Target Transitions, Draws, Reloads, Trigger Control, Shooting while Moving and much more! Guest star Don Golembieski (master gunsmith) takes you through equipment selection and maintenance. Disc Two has a bonus interview with your host, covering: cross-dominance, sighting techniques, fundamentals of shooting discussions, as well as "consciously moving your attention."

This video set will teach the skills and techniques needed to dominate in the competitive shooting sports as well as provide an advanced level of knowledge and skill set for the casual shooter. Highly recommended as your first competition DVD.

Vol.1-3-HTDVD \$19.95

Practical Shooting Vol. 4, How to Shoot Faster!

Shot with multiple cameras and the most advanced production techniques, this video, in conjunction with volumes 1-3, is the premier action pistol training program available!

Matt Burkett and Kevin Elpers are back in Volume 4 of the Practical Shooting Series to help you learn to shoot more quickly and accurately. Stuck in a rut with your shooting? This DVD can make the difference! Beginning with a review of the fundamentals from PSV 1-3, Volume 4 takes you to the next level - revealing the secrets of the Professionals. Topics covered include grip, stance, gear review, how to cure your flinch, bonus tip on elbow positioning, cadence, calling your shots, speeding up your draw, target math, handling pressure, and many drills that you can practice on the range.

In addition, Volume 4 includes a bonus section with incredible shooting from many of USPSA's top Grand Masters. Shot with multiple cameras and the most advanced production techniques, this DVD, in conjunction with Matt's first Practical Shooting, is the premier action pistol training program available. Runs 98 minutes.

Vol.4-HTSDVD \$19.95

Practical Shooting Vol.5, Winning IDPA Techniques

2003 National IDPA ESP Champion Matt Burkett teaches student Kevin Elpers the techniques required to be a successful IDPA shooter. Subjects covered include: Safety, equipment, draws, reloads, the IDPA classifier, shooting while moving, use of cover, tactical priority and sequence, and many more! Matt Kartoizian of Custom Glock explains what is legal or illegal equipment. Kurt von Rice helps you understand what division is right for you and discusses the IDPA scoring system in detail.

This is the first DVD in the shooting market with computer bonus material including hundreds of IDPA stages that you can print out! With over 90 minutes, this DVD teaches you the skills and techniques needed to dominate in IDPA as well as provides an advanced level of knowledge and skill set for the casual or recreational handgun shooter.

Vol.5-IDPADVD \$19.95

Practical Shooting Vol. 6, The AR-15

This is a two-disc set with over four hours of information on how to maintain, clean, set up, and shoot an AR-15! Disc One includes interviews with John Paul of www.JPrifles.com and Mark Buchanan of www.3gungear.com covering equipment and gear.

Disc Two is two hours of basic training with Matt Burkett and his star student Kevin Elpers. Topics include: basic shooting positions including off-hand, kneeling, squatting, sitting, prone, barricades, target presentation, transitions, multiple scope or iron sights usage, movement, secondary gun transitions - and much more. 275 minutes!

Vol.6-AR15DVD \$29.95

Practical Shooting Vol.7, How to Practice

"How to Practice" is a step-by-step video guide on planning your range time by working on the perfect drills for your specific needs. Professional shooter Matt Burkett instructs student Kevin Elpers in Volume 7 of the Practical Shooting Series - "How to Practice - Pistol Tips and Drills," revealing the concepts and techniques used by professional shooters to develop and hone their skills. Matt and Kevin show you how and what you need to practice in order to excel at practical shooting. By identifying problem areas, Matt will show you how to make your weaknesses your strengths.

Included are printable practice sheets you can take to the range, which will help you focus your practice sessions and begin tracking your improvement. 105 minutes.

Vol.7-HTPDVD \$19.95

Practical Shooting Vol.8, Shotgun Mastery (2-disc set)

World 3-Gun Champion Matt Burkett is back in Volume 8 of the Practical Shooting Series to help you learn how to master your shotgun. Learn about the guns and equipment it takes to win. Understand how to disassemble, clean and tune your shotgun.

Disc One - Setting up to Win - includes interviews with John Paul of JPrifles.com and Mark Buchanan of 3gungear.com, and covers: Setting up your equipment, gear, glasses, and ammo, and how to keep your shotgun running. The Remington and the Benelli series shotguns are covered in-depth with chapters on maintenance, modifications, and accessories.

Disc Two - Running the Shotgun - will teach you the shooting stance, gun mount, recoil control, reloading, mental game, and much more! Also, the techniques are tied to practice drills, which will definitely shorten your learning curve. 240+ minutes.

Vol.8-SGDVD \$19.95

Practical Shooting - IPSC Strategies

Matt's latest training DVD takes you through 10 stages at the USPSA Area 2 (Desert Classic) Championships. Critically breaking down each stage, he reveals all the crucial details. Hatcam footage is also included - for a first-person perspective for shooting each stage effectively! Bonus footage, including the 2005 Area 2 Championships and the chronograph procedure, is included as well. 70 minutes.

DAA Optics Shooting Glasses

DAA Optics Model Alpha

The DAA Model Alpha offers the serious competitive shooter a complete shooting glasses set with all the "bells and whistles" at a surprisingly reasonable price. The glasses are ANSI Z-87.1 Impact approved, and the Polycarbonate lens offer full 100% UV400 protection. The Model Alpha is a "wrap around" 1-piece lens glasses set, with a sturdy polymer, fiber-reinforced frame including a complete array of 5 lenses. The Set is packed in a handy hard case, providing protection and support for all the individual lenses and accessories. The nose piece is adjustable for a more comfortable customised fit and the side arms are slim, perfect for use on the range, under ear defenders.

DAAOPTIC-A-BK (Black) \$79.95
DAAOPTIC-A-BL (Blue) \$79.95
DAAOPTIC-A-R (Red) \$79.95

Alpha Set includes:

- Hard Protective Storage case
- One frame (available in a choice of Tactical Matt black, glossy black/blue or glossy black/red)
- A micro-fiber cleaning cloth
- A micro-fiber carry bag
- A headband strap which replaces the detachable side arms
- An Optic Prescription insert inner frame, designed to click into place behind the main lens.

5 interchangeable lenses, including:

- Clear, offering 92% light transmission
- Yellow, offering 87% light transmission with enhanced contrast and depth
- Smoke, offering 35% light transmission; ideal for moderately sunny days
- Blue Mirror, 22% light transmission; strikingly perfect for bright sunny days on the range
- Rainbow Mirror, 22% light transmission; great look for sunny conditions

Alpha Nosepiece

The adjustable nosepiece provides a comfortable snug fit, and allows adjusting the height of the frame as needed.

Prescription Optic Insert

The Optical insert can be easily snapped into place behind the interchangeable lenses, allowing you to use all the lens types with just one optic insert. The insert does not include correctional lenses, and you must order those from your optometrist.

Headband

DAA Model Alpha includes a replacement headband, which snaps into place replacing the side arms. It can be installed in seconds, without tools, offering a more secure fitting for those extreme situations.

Available in three frame colors

The Alpha Model is available with a choice of three frames - Tactical Matt black, glossy black/blue or glossy black/red. Additional frames can be purchased separately, allowing easier transition from one lens to another.

Replacement Frame
DAAOFRM-A-BK (Black) \$22.95
DAAOFRM-A-BL (Blue) \$22.95
DAAOFRM-A-R (Red) \$22.95

DAA Optics Model Echo

DAA Model Echo is an excellent choice for those who prefer a 2-piece lens shooting glasses. The glasses are ANSI Z-87.1 Impact approved, and the Polycarbonate lens offer full 100% UV400 protection.

The DAA Model Echo is designed with a sturdy polymer, fiber-reinforced frame and a complete array of 5 lenses. The Set is packed in a handy hard case, which provides protection and support for all the lenses and accessories. A serrated rubber nosepiece provides a comfortable fit for all.

DAAOPTIC-E \$74.95
Replacement Frame - DAAOFRM-E-BK (Black) \$22.95

Echo Set includes:

- Hard Protective Storage case
- One frame (Tactical Matt black)
- A micro-fiber cleaning cloth
- A micro-fiber carry bag
- A headband strap which attaches to the side arms
- An Optic Prescription insert inner frame, designed to click into place behind the main lenses.

5 lenses, including:

- Clear, offering 92% light transmission
- Yellow, offering 87% light transmission with enhanced contrast and depth
- Smoke, offering 35% light transmission; ideal for moderately sunny days
- Blue Mirror, 22% light transmission; strikingly perfect for bright sunny days on the range
- Rainbow Mirror, 22% light transmission; great look for sunny conditions

DAA Optics Model Lima

The DAA Model Lima is an inexpensive yet complete set of 4-lens shooting glasses. The glasses are ANSI Z-87.1 Impact approved, and the Polycarbonate lens offer full 100% UV400 protection.

The Model Lima has a wide wrap-around style lens, with a flexible lightweight polymer, fiber-reinforced frame and adjustable-length side-arms. The Set is packed in a handy hard case, which provides protection and support for all the lenses and accessories. The nose piece detaches from the lens, and can be transferred quickly and easily from one lens to another as you change colours.

DAAOPTIC-L \$39.95

Each Set includes:

- Hard Protective Storage case
- One frame (Tactical Matt black)
- A micro-fiber cleaning cloth
- A micro-fiber carry bag
- An Optic Prescription insert inner frame, designed to click into place behind the main lenses.

4 lenses, including:

- Clear, offering 92% light transmission
- Yellow, offering 87% light transmission and enhanced contrast and depth
- Smoke, offering 30% light transmission, ideal for moderately sunny days
- Light Blue Mirror, 35% light transmission, a striking look for those bright sunny days.

DAA Golden Multi Gauge

Never be without the right test gauge again!

This compact 4-pocket gauge offers all FOUR popular calibers in one piece - 9mm, .38Super, .40SW and .45ACP. The gauge is machined from top quality aluminium and anodized in gold color. The gauge pockets are finished using Clymer chamber finishing reamers, to ensure absolute correct dimensions.

The Multi Gauge measures only 16x 52x32mm and is small enough to fit into any pocket or tool box. The height is purposely cut shorter than other gauges, so that the tip of the bullet head sticks out. If a bullet gets stuck, as reloaded ammo often does - it can simply be pushed loose from below with a finger, without the need of a tool.

It includes a small eyelet for hanging the gauge on a key chain. A "must have" item in every range bag!

DAAGMG \$29.95

DAA Golden 20-Pocket Gauge

Any competitor serious about his shooting is aware of the importance of drop-testing one's bullets before a match. Since most malfunctions are ammo related, and most of those relate to deformed, bulging or otherwise defective brass - dropping the bullets into a gauge is an effective way to reduce the chance of a costly malfunction

The DAA Golden 20-Pocket Gauges, available in 9mm,

.38Super or .40SW. These gauges are machined from top quality aluminum, and the pockets are finished using Clymer finishing reamers,

which are the same used by top gunsmiths worldwide to cut the final dimensions on the barrel. The twenty pockets allow you to drop in rounds much faster than possible with a single gauge, cutting your testing time down to less than half.

A great deal of thought went into the dimensions of the block: The height is purposely cut shorter than other gauges, so that the tip of the bullet head sticks out. If a bullet gets stuck, as reloaded ammo often does - it can simply be pushed loose from below with a finger, without the need of a tool.

Available in 9mm, .38 Super or .40 S&W. Specify model when ordering!

DAAGPG \$54.95

FAST GRIP by Eric Grauffel

FAST GRIP gives your hands the moisture-resistant dryness needed for those fast draws and a sure grip, with none of that white chalky residue that other creams leave behind. Produced, endorsed, and used daily by a World Champion.

Eric Grauffel is a QUADRUPLE World IPSC Champion. He has won more IPSC Championships in the past decade than any other top IPSC professional competitor! Being a four-time World Champion means that Eric can be very selective in his choice of equipment and accessories. He uses what he feels is the best! FAST GRIP hand cream is the result of extensive research and development by Eric in conjunction with a French company. FAST GRIP gives your hands the moisture-resistant dryness needed for those fast draws and a sure grip, with none of that white chalky residue that other creams leave behind. No more nervous sweaty palms! Your hands remain dry for hours regardless of the climate conditions. This product is not only used and endorsed by the World Champion, it bears his name! Try it today and see the results for yourself.

EGHC \$12.95

Double-Alpha Academy PDR Holster

The new DAA Production Division Race (PDR) Holster is the latest word in competition holsters specifically tailored for the special needs of Production division IPSC / IDPA shooters.

The Production division has been growing rapidly in recent years, and in many regions is now the largest and most competitive class. Reasons for this vary, but primarily it is because Production shooting appeals to many for its simplicity, reduced costs, and return to the "more practical days" of Practical Shooting.

Thinking along these lines, Double-Alpha teamed up with world-renowned holster manufacturer, Front-Line, to design a holster which would meet and exceed the demands of this competitive division, while remaining true to its nature of practicality and simplicity. The DAA PDR Holster is a quick-draw Kydex holder with an injection-molded base for strength and durability. It offers a smooth and uninhibited draw, and a wide range of adjustable features.

Unlike most other Kydex holsters, the DAA PDR Holster has an additional inner suede leather lining to protect your valuable firearm from wear and scratches typical to other Kydex holsters. This inner suede leather lining ensures a smooth draw and a firm retention when the holster is tightened up. Tension adjustment is done by turning a single screw by hand, without the need for any tool or aid. The adjustment ranges from very loose to almost locked tight with just a few turns of the tension knob. The wide range of adjustability derives from the newly designed belt hanger to which the holster body is attached. This hanger is compatible with both 1.5" and 2" belt sizes, and can easily be changed back and forth from one size to another.

The DAA PDR now comes in two models! Low-Ride for USPSA and Belt-Ride for IDPA match use.

The Low-Ride Belt hanger offers a height adjustment range of over 8 cm, as well as a 3-position tilt angle adjustment. For shooters wishing to position the holster farther from the body, longer screws with plastic spacers are included. The Belt-Ride Hanger keeps the holster close to the body in a fixed position, meeting IDPA competitive requirements.

Available in **Black only**. Models include: **1911 Govt., CZ SP01, Glock, Tanfoglio, Sig 226/228, Springfield XD, S&W M&P, STI2011 Edge, STI GP6, and HK USP.**

You MUST specify model (Low-Ride or Belt-Ride), the pistol type, and right or left hand model when ordering!

DAAPDRH \$69.95

DAA Dust Cover

The DAA Dust Cover is made of durable long-lasting polyester 600D and features a slick "no-snag" lining to ensure easy-on-easy-off usage. The double-layer material and thin padding offer good protection to your valuable firearm without becoming too bulky or taking up too much space in your range bag. The material flaps beneath the sturdy zipper will keep dust and the elements away from your gun.

Each pistol cover includes a handy transparent ID pocket for placing a business card or competitor's badge to ensure that you and your dust cover can be reunited if separated on the range...

Available for right-hand (RH) shooters only.

Available in two sizes: Standard (for Standard and Production guns) and Open (for all scoped guns).

DAADCO (Open guns) \$16.95

DAADCS (Limited - Production guns) \$16.95

DAA Race Master Holster

We are extremely proud to present the new DAA Race Master Competition Holster to the shooting world.

Designed by Saul Kirsch, and with valuable input from Angus Hobdell, more than 30 years of top-level competition experience contributed to its design. After nearly two years in development, we can say with confidence that this is indeed the next stage in competition holster evolution. Try one, and we are sure you will agree!

We set out to develop a new holster with the following goals in mind:

- To offer the best and most advanced release system on the market
- To offer a wide range of position adjustments – and to hold those settings rock solid
- To offer both a fully locked safety feature and tension adjustment capabilities
- To allow the user to change from one gun type to another without having to buy a complete new holster
- To look sharper and cooler than any other race holster out there

We are pleased to say that the final product offers all these features and much more!

Looking the Part!

The Race Master Holster is as attractive as it is functional. No expense was spared in the design and construction of this state-of-the-art product. The entire holster is CNC machined from aircraft-grade aluminum and stainless steel and then hard anodized to offer a long-lasting surface finish in a selection of Black, Blue, Red, or Titanium Grey colors. LH model is available in Black color only.

D·D·U·B·L·E
ALPHA
ACADEMY
Promoting Excellence in IPSC Shooting

Holster (DAARMH) \$199.95

Must specify RH or LH, and model: STI/SV, 1911, CZ SP01, Glock, or Tanfoglio, STI/SV, SV Steel/Alum, 1911 Steel frame, PARA, Springfield XD, STI GP6/K100, Tanfoglio, (Sq. trigger guard), Caspian (Sq. trigger guard), Sig X-5, Sig 226/228, S+W M+P, BUL M-5 (Rd trigger guard), S+W 625 Rev. (-add \$12.00), S+W 686 Rev. (add \$12.00), Sphinx 3000, SPS/BUL SAS

Patent-Pending Locking Mechanism

At the very heart of the new Race Master Holster is a brand-new innovative Patent-pending locking system that offers a smooth clean release of the pistol and a solid grip on the gun when holstered.

Unlike other models, which rely on a muzzle support to hold the gun steady, or short holsters, which allow the gun to rock when holstered, the new Race Master holds the gun so steady, you cannot tell the pistol from the holster! And yet it draws upwards as smoothly as can be with almost no resistance at all.

The phenomenal locking is achieved by means of a unique sliding block, formed precisely around the front end of the trigger guard. This fitting is the reason for the gun's incredible stability in the holster. As the gun is drawn, the block, which resides in an angled track, slides out to the side, smoothly releasing the trigger guard and allowing the gun to be drawn with only 6-8 mm (1/4") of upward motion required to clear the holster.

Unlimited Adjustability

One of the most important features of a competition holster is adjustability. Being able to position the gun just right can make the difference between a lightning-fast consistent draw or that of a poorly failed attempt.

The Race Master Holster offers almost unlimited adjustability. And, thanks to its rugged aluminum construction and large-thread screws, when you lock the holster in your chosen position on your belt, it stays put!

Unlike other holsters, the Race Master is designed to give you access to almost all the adjustment screws while you are wearing it on your belt. Without removing your belt, you can adjust the height of the gun and the distance from your body, and even unlock the ball-socket hinge and adjust any angle of the holster. This is a huge advantage in setting up your holster just right.

Pistol Retention

Thanks to the Patent-pending locking mechanism, the Race Master Holster offers you a secure lock/unlock safety lever as well as a tension adjustment turn-knob.

The spring-loaded lock/unlock safety lever is conveniently positioned just below the trigger guard, enabling you to release the lock with an upward flick of your finger as you close your hand around the gun. The spring-loaded lever immediately snaps into place, either locked or unlocked, ensuring secure positioning.

The large stainless steel knob rotates several turns, increasing or decreasing the weight of the draw. This gives you a wide range of possibilities; from totally resistant-free for those fast "draw-facing targets" stages to almost completely locked when you want more resistance on the draw.

Advanced Belt Attachment

The Race Master belt-hanger is sleek and modern, showing off the pattern and color of your shooting belt. But it is designed for more than looks alone.

The hanger is attached to the belt by means of two spring-steel flat clasps that are screw-tightened on the inside of the shooting belt. This design prevents any separation between the inner and outer belts, ensuring that the Velcro layers firmly hold together at this crucial point. The range of tightening provided by the four screws guarantees that you can tighten and lock the holster rock steady on any 1.5" shooting belt. This design allows you to assemble your holster on your belt at the designated position without struggling to slide a tight-fitting belt-hanger the length of your belt.

The lack of any bulk on the inner side makes this hanger more comfortable, for extended wear, than any other comparable product.

Gun Compatibility

While the Race Master Holster is gun-specific, it is designed to enable you to switch from one gun to another without having to buy a completely new holster. All you have to do is change the relatively inexpensive locking-block assembly, available separately.

Now you can use the same holster for different guns!

Locking Block Assembly (DAALBA) \$44.95

Must specify STI/SV, 1911, CZ SP01, Glock, or Tanfoglio, STI/SV, SV Steel/Alum, 1911 Steel frame, PARA, Springfield XD, STI GP6/K100, Tanfoglio, (Sq. trigger guard), Caspian (Sq. trigger guard), Sig X-5, Sig 226/228, S+W M+P, BUL M-5 (Rd trigger guard), S+W 625 Rev. (-add \$12.00), S+W 686 Rev. (add \$12.00), Sphinx 3000, SPS/BUL SAS

The DAA Race Master Holster

By Dave Re

In my 16-some-odd year shooting career, I've had a number of different holsters on my belt. Inevitably, choosing a holster seems to come down to choosing the one whose downsides you most wanted to put up with. I've used so many over the years and have found all of them lacking in one-way or another. Recently, a new holster hit the market that promised to have all the good and none of the bad – the Race Master, made by Double Alpha Academy. I decided to give one a test, and see how it stacks up against the other holsters I've used.

Right out of the box, the Race Master seems to have several qualities of some of the holsters I have used. It's a "bikini" style holster – a smaller form factor that doesn't include a muzzle platform or cup (similar in form to the Ghost, Limcat, and Guga Ribas). It includes a positive holster lock, and a tension adjustment knob. It has an adjustment and positioning system that is based on a ball joint (though the range of motion is intentionally limited), and also has adjustments for holster distance from the body, and angle that the holster hangs from the belt hanger. The belt hanger is rather unique and, as it turns out, extremely sturdy and stable on the popular belts available on the market.

Several of the holsters on the market offer the ability to use the same holster with different types of firearms, usually involving the change of some minor parts. However, the existing offerings on the market can only accommodate guns where the trigger guard size is roughly similar to the gun the holster was sized for. What this has generally meant is that, if you wanted to run a Glock or a Sig in a race holster, you needed to buy a separate holster for that firearm platform. The Race Master, on the other hand, uses interchangeable insert blocks to handle each type of firearm. You can buy one holster, and then buy an insert block for each additional firearm type you want to use with. No need to remove one holster from the belt and add another, or own a complete second rig – with modern mag pouches that support multiple magazine types, you can do it all from one setup. Some folks will definitely find this feature useful.

That's a strong list of positive features – in fact, it would appear to be everything

one could really want in a race holster... The question, of course, is does the Race Master follow through on that promise? I think it does – here's why...

My first concern is always retention – how well does the holster hold on to the gun during various activities, and what do you have to sacrifice in terms of usability and feel to get adequate retention? This is usually where the compromise comes in with a race holster, that balance between hanging on to the gun, and letting it go when the shooter wants the gun to come out of the holster. Some do it by requiring that you lock the holster in order to do any movement, while others require that you crank down the tension on them prohibitively tight, or that you have to work around their lack of retention by managing the gun during any movement while the gun is holstered.

The Race Master is slightly confounding to me in terms of retention, in that I can't seem to get it to drop a gun. I've never come across a holster that I couldn't figure out some way to get it to drop a holstered gun. I'm talking about unlocked, using the lightest tension setting available, and with a fully loaded (with dummy rounds) big stick in the gun. I've tried a number of exercises with the holster in that condition – the "old school IPSC" holster retention tests (forward somersault,

jump and turn 180 degrees), jump and turn 360 degrees in both directions, short distance sprints... I've even done plyometric box jumps to a 20" tall surface, an activity that should theoretically tickle the holster's method of gun release. No dice. The gun stays put. Bottom line – this holster has the unqualified best retention of any holster I've personally tested throughout my shooting career.

The second concern, for me, comes down to feel – how does the holster's draw feel when it's set up correctly, and configured in the fashion it's actually going to be used in (that is, with tension set appropriately, etc). As a holster's feel is determined by its design, each of the holsters mentioned above has a different feel to it. Many folks find that they cannot get used to the feel of one type of holster, and feel becomes an important decision point for them. Usually, if a holster retains the gun well when unlocked, the feel can be a little harsh, as you have to pull the gun through the retention mechanism of the holster. Surprisingly, even though the Race Master refuses to give up the gun in all the retention tests I performed, when asked nicely, it let's the gun go almost disconcertingly eas-

ily. It feels almost as if the gun is just resting on top of the holster, rather than being retained by the holster's slide lock system. If you're used to a Ghost or Safariland holster, you'll find the Race Master to release the gun with similar ease, but smoother. If, like me, you've been using a CR Speed, you may find that you need to dial in some tension so that you can "feel" the holster when you draw the gun. About 3/4 of a turn seemed to do it for me. This is not a bad thing – more tension on the holster translates to enhanced retention, and having the ability to tune the feel exactly as you like it without having to give up anything on retention is a real bonus with this holster.

From the standpoint of fit and finish, the holster is very well done. There are no sharp edges that need dressing, and the holster body is compact and stays out of the way during the draw. The holster is also out of the way when going prone. As I mentioned earlier, the belt hanger on this holster is quite interesting. On my CR Speed belts, the hanger fits over the belt like a glove, and when the retainer clips are tightened down, the holster literally does not move on the belt (unlike basically any other holster I've tried, minus the Ghost). Apparently, on Double Alpha Academy's belt, the hanger fits even tighter! This results in no movement of the holster during the draw, which contributes to the fabulous feel of the holster, and also prevents the holster from moving on the belt over time. Now, if we could get these hangers on mag pouches!!! The hanger also allows the outer belt's Velcro to make contact with the inner belt. This is the first holster I haven't had to use additional Velcro on the inside of the hanger to insure secure mounting to the inner belt. I'm also happy to report that the holster survived

gorilla torquing with nary a complaint. I'm confident the adjustments I made will hold themselves in place over time without moving. Time will tell, of course, but this seems like a safe bet.

My only gripe with the holster is a very minor one, and involves the serrations on the bottom of the safety. I understand the design choice, here, of course. The serrations give your finger a way to grip against the lever and move the lever without slipping off of it. They really eat into my finger, though, when taking the lock off during the draw. Given how well the holster retains the gun, this may very well turn out to be a non-issue, just because it won't be necessary to use the safety on the draw 99.9% of the time. However, Saul Kirsch at DAA tells me that they will shortly be offering an optional safety lever that has had the serrations removed, making it smooth and about half as thick. One could also use a dremel tool to accomplish something similar, if desired.

Finally, I consider how easy the holster is to adjust to the right position. If the holster has good fit and finish, this will likely only happen once, when you first purchase the holster. Another difference between each of the holsters is how it's adjusted. Every one of these holsters adjusted differently, but they all offered some means to adjust height, rake (angle of the gun from front to back), and rotation. A couple of them give you ways to adjust the distance of the holster from the body directly, as well. Some of them are easier to adjust than others. Conveniently, the Race Master includes all of these options, and allows you to put the gun in exactly the right spot for your body. This is seriously important, as the holster does not respond well to torquing the gun off angle during the draw (all race holsters exhibit this to one degree or another) – the gun will tend to bind in the holster if you don't set it up correctly. This isn't a new phenomenon to those familiar with race holsters, but it's one that will drive you nuts if the holster can't be put in the correct spot relative to your body. I was able to position the holster exactly where I needed it, and it would seem that there should be enough adjustability to accommodate all potential users of the holster.

I did encounter a minor challenge in adjusting the holster, due to the ball and socket design. I anticipated this issue, based on my experience with the Guga Ribas holster's ball and socket

system. The ball and socket design means that the holster can be adjusted in a seemingly infinite number of angles and directions. The problem is, it can be adjusted in all of those angles at the same time. The Race Master uses two largish Allen head screws (called horizontal displacement adjustment screws) to secure the ball (the screws will actually bite into the aluminum ball when you torque them down tight). The downside to this is that you can't really use one of the screws as a "drag" adjustment, so that you can keep some tension on the ball while you adjust it. Instead, you have to keep one of the supplied Allen wrenches handy in your weak hand, and snug up one of the screws while holding the holster in position. In addition, the elevation adjustment screw also contributes somewhat to the tension on the ball, so you have to be careful about changing the position of the ball if you have to change the holster height. All this means that you basically need to be patient and take your time in adjusting the holster. This is not a big deal, just something to note and be prepared for.

Once you get the holster adjusted, you can lock all the screws down tight, and you shouldn't have to touch it again. I mean that, too – once the adjustments are locked down, this holster feels like it's made from a solid piece of billet steel, it's so solid. The design of the hanger and ball and socket on this holster are very simple, and this allows them to be extremely secured without risk of stripping the screws, or having the ball slip in the socket.

So, that's where I'm at with it a week into my evaluation. The Race Master is a solid piece of kit that delivers on its promises. It's rock solid; it retains the gun extremely well, and has a silky smooth draw feel. I'm going to reserve final judgment until I spend more time with the holster, but for now, the Race Master appears to be the best race holster for USPSA/IPSC competition that I've ever used.

Update: DAA Race Master Holster

by Dave Re

About a month ago, I published an initial review of the DoubleAlpha Academy's new Race Master holster. I promised an updated review once I'd spent some more time with the holster, so... here we go!

Since my last word on the subject, I've spent several days on the range with the Race Master, quite a number of dry fire sessions, taught a couple of lessons, shot a couple of local matches, and shot the High Desert Classic in Albuquerque, NM. I'm pretty comfortable offering a solid opinion on the performance of the holster, at this point.

In terms of performance, I noticed quite quickly that on closer, "warp speed" type of targets, I picked up a tenth of a second my draw vs. the CR Speed I'd been using. Unlike longer/harder shots, where a number of other factors can come into play, on up close stuff the draw speed comes down to the ability to get on the gun quickly, get it out of the holster smoothly and accurately, and pushed straight into the target without hesitation. The holster itself can play a part in the absolute speed of this sort of draw. Given the consistent change in my draw speed on these types of targets, the Race Master is definitely faster for me than the CR Speed. As the shots got harder, the difference between the two shrank, as would be expected.

As I grew used to the holster being on my hip, my confidence in its ability to retain the gun grew. You'll note in my original

review that I found this holster to have very impressive retention capabilities. It's one thing to know that logically, but living with the holster for a while really made it sink in. We had a start at the HDC that required you to draw the gun while remaining seated. With most race holsters, this is sort of a nervous situation, as the gun is sort of precarious hanging out in the holster, or you're taking a slower draw to start with your holster locked. With the Race Master, it's unlocked and solid, with no concerns around bumping the gun out of the holster on the draw. My confidence is very high in this holster, at this point. I would state without reservation that this holster has the best retention of any holster I've used.

The holster remained comfortable, even through a long day of wearing the rig. I've seen some concerns about this voiced on the Benaverse, and can definitely say that I do not find the holster uncomfortable on my body, despite the lack of some kind of pad or spacer to keep the holster off of my leg.

In a month's time, I have not had any issues with the adjustment screws backing out or changing tension. So far, so good, in that regard. Still, it wouldn't be a bad idea to check on them every so often, just to be sure they're staying snug. If you lose one, DAA offers a spare screw kit for the holster. It would probably be prudent to pick one of these up just for purposes of avoiding an encounter with Mr. Murphy, but not something I'd consider necessary, at this point.

One thing that I will take advantage of, though, is the slim safety lever. I do still notice that I brush the safety lever with the middle finger on my strong hand occasionally on the draw. It doesn't get in the way of the draw, but I notice it (because the teeth of the lever bite into my finger pretty sharply), and the last thing I want mid-stage is to be thinking about how my finger hurts! DAA received some early feedback about some folks having this issue, and devised the slim safety lever in response. It's the same part as the stock lever, just with the serrations removed - excellent little personalization to the holster.

I've also read that some folks have had issues with the tension adjustment screw falling out, usually when they have tension set extremely light. I haven't experienced that with my holster, personally. I've also seen reports of the head of the adjustment screw interfering with folks' draw. I don't encounter that, either. DAA reports that they've got something in the works to help folks that run the holster with super light tension, though. Here's a company that listens to feedback and makes changes to improve their products.

In the end, perhaps telling you that my CR Speed holster will be up for sale soon would give you a clear picture of where I'm at with the DAA Race Master. The Race Master beats the pants of any other holster I've used, and I feel it's the best race holster on the market today.

Mr. Bullet Feeder by DAA

- The perfect add-on to your reloading machine!

Mr. Bullet Feeder by DAA has arrived! Order yours now!

DAA is proud to introduce the new Mr. Bullet Feeder by DAA. DAA and Rak Systems have teamed up in retooling and redesigning the Mr. Bullet Feeder, with fantastic results. The new Mr. Bullet Feeder by DAA, now manufactured by Double-Alpha Academy under

license by Rak Systems, is a professional, hi-tech version of the original. It is lighter in weight and more compact than the previous models. This new streamlined product is easier to install and set up, while retaining the same flawless performance and efficiency of the original design.

The new Mr. Bullet Feeder by DAA is available in 9/38, 40SW/10 mm, and .45. Rifle calibers .223 and .308. Pistol calibers are available now. Rifle calibers will be coming later this fall. YOU MUST SPECIFY YOUR DESIRED CALIBER WHEN ORDERING.

DAAMBF \$469.95

Mr. Bullet Feeder by DAA - See Pg.72 in this catalog for full details and accessory information!

CED Hearing Protector Belt Clip

The simplest and most practical way to carry your hearing protectors when they are not on your ears!

The new CED Hearing Protector Belt Clips are constructed of strong and durable fiber-reinforced polymer. Considerable force would have to be applied to break one! The belt loop is wide enough to accommodate any width shooting belt; the flexible hanger loop is multipurpose and will work great with any equipment you choose to hang on it. Available in Blue, Black or Red.

CEDHPBC \$2.95

EZ Rattler Easy Loop Lock

A Cable Lock That Protects Everything!
It's fast and easy; just "Loop It and Lock It."

The New Patented locking plate secures irregularly shaped objects by increasing control of the cable with a mechanical advantage, easily securing almost anything! The Easy Loop Lock can secure anything to sign posts, fences, trees, bike racks, and more!

NEW Patented Flat Cable

- New 2x (twin cables) More Cutproof Than Single Cable
- Lugs are plastic coated to prevent scratching
- Each Locking Lug is made of forged steel that is press-on to the steel cable
- Can make up to 4 Locking Loops!
- Stainless Steel, No Rust / Marine Only
- 48 adjustable locking positions
- Lock multiple items with One Lock
- A 54" Long cable lock, that allows multiple cables to be added to make extra long loops
- Carrying case included

Avail. in Military Green or Black color - Specify when ordering

EZRL \$39.95
Sale \$32.95

Ghost Holster

AS GOOD AS IT GETS

Now, you can have one holster for both disciplines! Open or Limited: One holster, two guns. Ghost Holster offers you this versatility so that you only have to set up one holster rig. This latest design, made in Italy by top professionals, features a pinless locking system, which makes it easy to switch pistols without any modification work required. A dual locking arm ideally allows the user flexibility when firmly locking the pistol in the holster. With the locking arm in the upright position, the pistol remains totally secured in the holster. The lower locking arm position keeps the pistol secure, while providing smooth and fast release and effortless draw when needed! Available in STI, SVI, 1911, & most Glock models. Please specify RH or LH when ordering. GH \$149.95

Features:

- Positive Locking: Ghost Holster offers you a positive locking mechanism to keep the gun securely in the holster.
- Super Lightweight: Ghost Holster is very lightweight and sleek in design.
- Four Axes of Adjustment: Ghost Holster offers four axes of adjustment to provide that perfect adjustment and fit!
- Open or Limited: One holster, two guns.

DAA Race Master Magazine Pouch

We are proud to present the DAA Race Master Magazine Pouch!

First of its kind, this hi-tech magazine pouch was designed by Saul Kirsch, using advanced Cad-Cam software. It is the perfect complementary equipment for the now hugely successful DAA Race Master Holster.

Like the innovative Race Master Holster itself, the Race Master Pouch is a completely original design, unlike anything else seen on the market to date.

It is constructed from aluminum rather than plastic, and this allows a design and performance never before possible in a competition mag pouch. It offers a wider and more diverse range of adjustability and mounting options – and more important, locks rock-solid in the chosen position, not losing its settings until the user chooses to change them.

Its wide range of angle adjustments allows the user to position his magazine “just so”. This feature, combined with a unique and superior retention system, creates a smoother and more consistent release, leading to a more reliable and faster reload.

Unlike all other pouches, this pouch’s pressure adjustment wheel applies its load to the back of the magazine, squeezing the mag tube from back to front rather than from left to right, as most others do. This is a lot more effective, as the magazine’s front and back walls are straight and parallel, while the side walls are tapered on all double-stack mags. This type of contact creates a far smoother draw of the magazine. A few turns of the wheel changes the tension from very loose to very tight, as may be required on a particular course of fire. The side and back inner plastic spacers are specific to the magazine size.

The hanger system of the Race Master Pouch borrows heavily from the excellent features of the Race Master Holster. The inner side of the hanger fits snugly over the shooter’s outer belt, preventing any rocking motion. Since the hanger can be assembled directly in the chosen position, and does not need to slide all along the belt, it can be made with a tighter fit. The minimalist steel plate on the inside of the hanger causes no separation between your inner and outer belt. This is critical, especially when carrying 3 or 4 pouches side by side. The steel plate can be tightened down, to lock the pouch tightly

even on thinner, narrower belts.

The cant and tilt of the pouch is achieved by using a ball-socket joint as in the Race Master Holster. The aluminum ball is locked firmly in place with two set-screws. The ball-socket joint is purposely set off-center on the belt hanger, allowing the user to choose between two heights when fitting the pouch to his belt. The ball joint locks into the body of the holster so that it cannot slip or rotate, even if the center screw comes loose. This is a new and very unique feature of this pouch.

Three mounting points on the pouch body allow for ambidextrous use, as well as making it possible to mount the pouch turned 90 degrees away from the body, as preferred by some shooters.

The DAA Race Master Aluminium pouches are supplied with 2 sets of spacers. The first set (assembled) is designed to fit the 2011 STI magazines. It will work perfectly also for SV, Para, SPS, BUL M5 and any other wide body 2011 type mag we have tried.

The Second set of inserts are designed for the CZ SP01 mags. They are a perfect fit also for the

small Tanfoglio mags. For other model magazines, some fitting may be required. It may be necessary to remove some material from the back side of the side spacer, to allow more room for slightly wider mags. This we have seen with Glock and S&W M&P mags, and is sure to be the case with others. This fitting can be done in minutes with a piece of flat sandpaper, or in seconds with a belt sander. A single-stack adapter is available separately as an accessory.

Also, please note that these pouches are made of aluminium. It is to be expected that the steel magazines will scratch and burr the top edges of the pouch over time, however this has no effect on the function of the pouch.

The DAA Race Master Magazine Pouch is suitable for right or left-handed shooters, for all double-stack magazines, and is **available in Black, Silver, Blue, or Red.**

DAARMMP \$59.95

Combo: DAA Race Master Pouch and Magnet

Now you can order your Race Master Aluminium mag pouches already pre-fitted with our Super-Strong pick-up magnet already fitted for you. We attach the magnet directly to the pouch body, using an M5 screw threaded into the front side wall of the pouch body. Like the innovative Race Master Holster itself, the Race Master Pouch is a completely original design, unlike anything else seen on the market to date.

It is constructed from aluminum rather than plastic, and this allows a design and performance never before possible in a competition mag pouch. It offers a wider and more diverse range of adjustability and mounting options – and more important, locks rock-solid in the chosen position, not losing its settings until the you choose to change them.

Its wide range of angle adjustments allows the user to position his magazine “precisely”. This feature, combined with a unique and superior retention system, creates a smoother and more consistent release, leading to a more reliable and faster reload.

Unlike all other mag pouches, this pouch’s pressure adjustment wheel applies its load to the back of the magazine, squeezing the mag tube from back to front rather than from left to right, as most others do. This is a lot more effective, as the magazine’s front and back walls are straight and parallel, while the side walls are tapered on all double-stack mags. This type of contact creates a far smoother draw of the magazine. A few turns of the wheel changes the tension from very loose to very tight, as may be required on a particular course of fire.

The side and back inner plastic spacers are specific to the magazine size. Each pouch is delivered with two sets of spacers: one that fits the larger STI type magazines (assembled as default), and one for the slightly smaller CZ/Tan type double-stack mags. A single-stack adapter is available separately as an accessory.

The DAA Race Master Magazine Pouch is suitable for right- or left-handed shooters, for all double-stack magazines, and is available in Black, Silver, Blue, or Red.

Please note that these pouches are made of aluminium. It is to be expected that the steel magazines will scratch and burr the top edges of the pouch over time, however this has no effect on the function of the pouch

The DAA Race Master Pouch – A First Look

By Dave Re

Every once in a while, someone comes up with a better mouse-trap. They get dissatisfied with the current market offerings for one reason or another, and they put on their thinking caps, and BAM, you get something new and interesting to look at. Never being one to turn down a look at one of these new products, I had to say “Yes” when Saul Kirsch of Double Alpha Academy asked me if I’d like to try out their new Race Master Pouches for T&E and review. Let’s take a look...

I’ve tried out a number of magazine pouches through the years, and have been using the CR Speed pouches for a while, now. They seemed to offer the best mix of access to the mags, speed, flexibility, and durability to my taste, albeit at a higher price than other offerings on the market. The CR Speed pouches have their flaws, but seemed like the best choice at the time.

Enter the Race Master Pouch. Designed as a complimentary piece of kit to go with their superb Race Master Holster, the Race Master Pouch definitely embodies the term “solid”. Machined from aluminum, this is not some injection molded cheapo piece of gear that will break or wear out quickly under a little stress.

Included in the box are the pouch, an extra insert and pressure plate, two Allen

wrenches for adjustment, an extra nut and screw (for configuring them “sideways” – see below), and a crystal sticker with the DAA logo for you to put on them once you’ve set them up for the correct “handedness”.

I was immediately pleased to notice that DAA had carried over the principles of the holster’s hanger design to the pouch. One of the big annoyances I’ve had with the CR Speed pouches I’ve been using is that they don’t fit snugly on the belt, allowing the pouches to move around if you don’t take steps to improve the fit (for instance, by wrapping electrical tape around the belt to build it up – I know of some folks that have drilled and tapped the CR Speed hanger to run a screw through the hanger into the belt, even!). When I first put one of the Race Master pouches on the belt, it was rock solid, just like the holster. The fit is impressive using a CR Speed belt, and I have to imagine that on the DAA belt, the hanger’s fit even tighter (much like the holster). No worries about migrating mag pouches!

Much like the holster, finding the optimal angle and position for the pouch is fairly simple, once you get the right amount of “drag” on the set screws so that you can still move the pouch around, but with just enough resistance so that it stays put so that you can test it carefully. Unlike most of the other popular mag pouches on the market, the Race Master can be adjusted in three axes – rake and cant, plus height. Most only have rake and height, or just rake (rake being the angle the magazine is held at vertically). In addition, you can configure them so that the mags are held with the back of the magazine toward your body, if you prefer that presentation – and you still retain rake, cant, and height adjustment. Very versatile adjustments!

The pouches come configured for typical wide body 1911/2011 magazines – STI, Para, and similar. A second insert is included with the pouches to allow you to convert them to hold CZ SP-01 sized magazines correctly (as well as other small bodied CZ style mags made by Tanfoglio and the like). With a little tuning (sandpaper or a belt sander), this insert can also be adjusted to allow Glock and M&P magazines to fit properly. I haven’t tried this, yet, but I do have an M&P, and so can evaluate this possibility later. There is also an insert available for 1911 single stack magazines as an accessory.

The first thing I noticed upon inserting an STI magazine into the pouch was that it fit like a glove. Even at the lowest tension setting, there’s no danger of this magazine coming loose by accident. The tension adjustment is different on these, too. Rather than pinch the mag from side to side as is done on virtually every other mag pouch in production, the Race Master Pouch puts tension on the mag from front to back by way of a spring loaded pressure plate that the shooter can adjust via an adjustment wheel set into the back of the pouch. No screws sticking out to get caught on things or accidentally misadjusted.

Reloads out of these pouches are smooth and fast. I was initially concerned that due to them covering more of the mag than the CR Speed pouch, I’d get slowed up by having to move the magazine further laterally to get it free, but the clock doesn’t indicate an issue. I don’t feel any difference, that way, either. Just a nice, smooth release. You can’t ask for much more than that...

Follow up...

I’ve put a lot of mileage on three of them, including two major matches. I think I can pretty accurately describe for you my findings after using them for that period of time. And ... they’re really good!

After shooting a number of rounds with the pouches in practice, several local matches, the USPSA Open Nationals, and the 2011 USPSA Area 2 Championship

with the Race Master pouches, I can definitely say they’re staying on my belt.

Much like the Race Master holster, you can tighten the adjustment screws quite firmly. The pouches just don’t move after that (also owed in part to how stable the hanger is on the belt). This has actually led to my reloads being much more consistent, as the magazine is always in the spot I expect it to be. Whereas before, I’d tend to fumble reloads when I was pushing on speed, I do it far less frequently out of these pouches because my ability to attain a solid, consistent grip on the magazine is so much better than it was with the CR Speed pouch. That was an unexpected benefit, but one I’m more than happy to reap the rewards of, for sure...

Through all of that stick time, I’ve had all three pouches set on their lightest ten-

sion setting. No yard sales, yet the pouches release the mag very easily. Much better than other pouches I’ve used. Early on, I noticed that I was banging the knuckle on my middle finger on the lower/outside corner of the pouch. That went away on it’s own – I don’t notice it at all, now.

I also noticed that my belt weighs a bit more in the hand. After all, these pouches are metal, and weigh more than a plastic pouch. However, the weight isn’t noticeable on the belt after a long day. The weight of the gun and magazines is far more, and I do what I can to keep at least the magazines off of my belt when I’m not actively preparing for a stage.

I’ve noticed one strange thing with the first pouch on my belt. I run that one with a little more angle on it. The pouch is developing a small burr on the inside front edge of the corner furthest away from my

body. I suspect this is due to the feed lips (or possibly some other part of the magazine) dragging across that corner as I draw the mag out and move it up toward the gun. It hasn’t gotten bad, or sharp, at this point, but I should be able to smooth that out easily with a small file and some sandpaper if it gets worse. I’d label this “no big deal”. This hasn’t happened with the other two pouches – of course, the predominance of my reloads have come out of the first pouch, but I don’t think I’ll see that out of the others, due to the difference in angle.

So, that’s really about all there is to tell you about them. Much like the Race Master holster, DAA’s Race Master Magazine Pouch is a solid piece of kit, and one that I’ve added to my own belt for the long term.

DAA Deluxe Magnetic Pouch

The DAA Deluxe Magnetic Pouch utilizes two powerful 32mm magnets to hold the magazine securely in place while providing a smoother release than that achieved from the larger standard Magnetic Pouch. The support side walls allow us to use smaller magnets which in turn make the pouches more useable as an all-round pouch for every day use, and not just as a designated pick-up Pouch.

For those shooters who like the simplicity and minimalist look of an open magnetic pouch - this is the perfect choice! The slim body makes it possible to position pouches closer together while still leaving enough room to reach down and grab the magazine correctly. The lack of external or front pouch walls allow the pouches to be spaced that much closer together. Perfect for Standard or Production where one must wear the pouches behind the hip-bone.

The pouch is attached to our new model belt hanger, which locks securely on any 1.5" belt, clamping down to hold tightly even on thinner belts. The pouch can be swiveled around the center screw (lower magnet’s middle) to angle the pouch as desired. The off-center mounting point on the hanger offers the option of two height adjustments to choose from. The pouch body is machined from solid Delrin, making it tough and durable. Available in black color and for Right-Hand shooters only.

DAADMP \$44.95

DAA Racer Holster

In 2010 DAA introduced its revolutionary Race Master Holster, which turned the world of competition holsters on its head. The Race Master became an overnight success, with thousands of shooters world-wide retiring their older model holsters and upgrading to this latest innovation. In an incredibly brief time, the Race Master Holster firmly positioned itself as the leading brand, bringing in countless match wins, including the European Steel Challenge and the IPSC World Championship.

However, the all aluminum construction and flexibility of the Race Master makes it an expensive holster. Seeing the need for a less expensive variation of this successful design, DAA set out to develop the DAA Racer Holster.

At the heart of the new DAA Racer Holster lies the same innovative patent-pending mechanism that makes the Race Master stand head and shoulders above the competition. But what the Race Master achieves with interchangeable Delrin inserts inside an aluminum housing, the Racer does with no housing at all. Same peak-performance, driven results, but without the high costs of machining.

DAA reduced costs further by eliminating the large external tension adjustment knob, which many deemed unnecessary, and set the tension to light (this can be adjusted internally for the users preference). The same locking system allows the DAA Racer Holster to hold the pistol by only its trigger guard, just as steady and secure as the Race Master does, and the same spring loaded safety is conveniently positioned in the rear of the holster, where it can be easily and swiftly accessed on the draw.

Where other manufactures go to plastic to reduce costs on their hanger - DAA did not. They believe that one of the most important features in a competition holster is the ability to position it just right for the user, and then to lock it up rock solid on the shooting belt.

DAA redesigned the hanger to reduce costs, however it remains an all aluminum structure and utilizes the same ball-joint design that the Race Master uses. In fact, the new hanger with the round vertical rod offers an even wider range of adjustment than the Race Master's system.

The DAA Racer Holster is shipped with a detachable thigh pad, which pivots within a range of aprx. 40 degrees to mould itself to the thigh as the shooter moves, reducing movement of the holster and increasing comfort.

The belt hanger is again a variation of the successful Race Master design, just made narrower and lighter.

Our now familiar minimalist steel locking plates on the inside, allow the user to maintain good contact between the inner and outer shooting belt.

The entire holster weighs in at just 230grams (8.11oz.) making it the lightest race holster on the market! And while no interchangeable block is available for the DAA Racer Holster, a wide range of pistol models are supported, including the STI, SV, 1911, Beretta 92F, BUL M5, SPS, BUL SAS, Caspian, CZ SP01, Glock, STI GP6, Para Ord, S&W M&P, S&W L frame, S&W N frame, Sig 226/228, Sig X5, Tanfoglio, Tanfoglio Stock III, and the Springfield XDM.

Available only in a black body, the holster projects a splash of color and elegance by adding a laser-cut side plate, that is available in Black, Blue, Silver or Red.

DAARACERH \$129.95

DAA Racer Magazine Pouch

In 2011 DAA introduced the all aluminum Race Master Mag Pouches, the first of their kind. Their innovative design is so different from other model pouches that all who used them were instantly fans.

However, their one shortcoming is their high price tag... A \$60 pouch is not affordable by all, especially when one considers the need for 3 or 4 of them on your belt. Although ideally suited and matched to the DAA Race Master Holster, it was felt by DAA that a more economic version of this great mag pouch was needed to launch with the DAA Racer Holster. So DAA set out to develop and produce a new plastic molded version of this same winning design, and are now proud to introduce the all new DAA Racer Pouch, the perfect mate for the DAA Racer Holster!

The DAA Racer pouches borrow heavily from the Race Master Pouch. In fact, DAA took the very same body design, modified it to suite plastic mounding requirements, while maintaining the exact same unique "pressure from the back" adjustable holding system that has proven so successful. Interchangeable inserts allow the user to go from larger 2011 mags to smaller CZ / Tan mags. A single stack spacer is available as an accessory as well.

The Racer Pouch is completely ambidextrous, allowing easy mounting for both left or right hand users. And the pouch can even be mounted at 90 degrees away from the body, just as can be done in the Race Master version.

The belt-hanger of the pouch utilizes the same minimalist steel plate design, which eliminates separation between the inner and outer belt. The belt hanger has been simplified though - there is no ball joint as in the aluminum RM pouch, because that simply could not be achieved in plastic material in this size. However, the pouch can be adjusted for tilt in very small increments, allowing each shooter to find the right angle for their preference. Once the correct angle is set and the center screw tightened, the serrations in the connector piece lock up, preventing any possibility of the pouch rotating until the center screw is loosened several turns.

While these pouches may not offer the unique look and feel of the all aluminum Race Master pouches, or the ball joint tilt base, they are indeed robust and durable, and the performance that one can expect is every bit as good as that of its big brother. And with a price tag of almost half that of the Race Master pouches, the Racer Pouch will be the perfect choice for many.

Available in Black, Blue, Red or Grey / Silver.

\$32.95

DAA In-Mag Bullet Counter

The DAA In-Mag Bullet Counter is an invaluable tool for any Production or Limited-10 division shooter, who wishes to quickly and easily control how many rounds are loaded into the magazine.

Simply push the Bullet Counter down on the top round, using the pre-positioned fiber optic "marker" to determine if the correct number of rounds are loaded into the magazine before beginning the stage of fire.

The tip of the Bullet Counter is contoured to match the side of a 9mm case, and a small lip fits into the rim of the case, to provide even more secure positioning. The grip handle design is rounded and comfortable to use when pressing down with the palm of the hand.

Along the side of the machined aluminium shaft are 24 closely spaced holes, into one of which the fiber optic rod (included in green and red) can be placed to mark the correct position for 10 or 15 rounds or for any number of rounds desired to control.

Then simply push the Bullet Counter

down, and if the fiber optic dot aligns up with the top edge of the magazine lip, then the correct number of bullets have been loaded in the magazine.

DAAIMBC \$19.95

The DAA Super-size STI Magwell

The new DAA Super-size STI Magwell offers great advantages for Open class STI shooters.

It is precision machined from aircraft-grade aluminum to meet the tightest tolerances. It clicks into place and perfectly blends with the inner contour of your STI frame, without any modification or fitting.

This Super-sized magwell creates a huge opening of 49mm, almost 2 inches

wide, and 62mm (2.5") long, for a faster, smoother reload every time. The inner side of the magwell is a polished surface angled at a steep 65-degree angle, allowing for a consistent, resistance-free reload.

The DAA Super-size STI Magwells are available in a choice of 3 hard-anodize finishes, Blue, Black and Clear, which not only create a striking look, but also offer a tough surface finish to help protect from scratches and nicks.

Each magwell is supplied with a customized Super-size stainless-steel assembly pin to replace the original STI mainspring housing pin. **DAASTIMW \$99.95**

DAA Magnet Pouch

Magnetic pouches are handy devices, and provide a real advantage on those stages where you need to pick up multiple magazines at the start of the stage. Of course, the one problem those "stand-alone" magnetic pouches create, particularly for Standard and Production class shooters, is that they take up space on your shooting belt, and force you to move your other pouches farther back, to stay legal behind the hip bone.

To address this problem, we are pleased to now offer the new DAA Magnet and pouch combo. This offers you a new and complete DAA pouch, onto which we have solidly mounted one of our super-strength magnets, to allow you to snap-up that extra mag onto the front of your pouch, without taking up any space on your belt!

The magnet is mounted to the base of the pouch, to ensure it remains rigid and solid when you place or draw off those magazines against the pull of the magnet. The pouch itself functions normally, except for a restriction in the amount of tilt back allowed when the magnet is mounted on the pouch.

Our magnet is assembled using a rubber-coated aluminum bracket, which is wrapped around the pouch, leaving the box pouch untouched. This provides extra strength to the magnet without interfering with the pouch itself. **DAAMP \$72.95**

DAA Magnetic Magazine Holder

A must-have item for those "pick up the mag" stages. With this custom-made magnetic mag holder, you can slap your extra magazine onto your belt as fast as you can pick it up from the table! Never again waste precious time fumbling to insert a magazine into your magazine pouches!

The magnet used is almost 50mm in diameter and over 10mm thick, giving a pulling power of over 100kg! This ensures that it will hold your loaded magazine securely in

place even as you run and jump. Its smooth surface enables you to grab the magazine and slide it off upwards, when you need to use it to reload. The magnet is so powerful that you cannot possibly pull the magazine straight off the magnet, but rather you have to slide it upwards, which works great for a fast reload. **DAAMAG \$44.95**

Warning! Keep magnet away from your credit cards and electronic equipment!

Single-Stack Adapters for DAA Pouches

The Single-Stack Adaptors (Spacers) Kits allow you to use either the DAA Competition Mag Pouch or the new DAA Race Master Magazine Pouch as a single stack magazine pouch. The kits include CNC machined polymer spacers and accessories which can be added or removed easily, providing flexibility for use with either single stack or hi-cap magazines.

Please note: This product is ONLY the Spacer Kits. The magazine and mag pouch shown in the picture are not included!

Double-Alpha (DAA) Competition Belt

CED is proud to present the new Double-Alpha Competition Belt. This new Inner & Outer shooting belt offers the best features for serious competition shooters.

The inner belt is designed streamlined and slim-profiled to prevent it from adding too much thickness under the outer belt. This helps to ensure you wear your gear close to your body in the most comfortable way. The inner belt is pointed at one end to facilitate easy threading through pant loops. Of course the inner belt carries the soft Velcro layer to prevent it from snagging on clothing or car seats when worn separately.

The outer belt is simply the strongest and stiffest belt on the market today, bar none!

It is constructed of a tough, web nylon outer, covering a fiber-reinforced polymer core, which gives the belt its impressive rigidity. We designed the belt to be slightly thicker than most others, so that the holsters and pouches mounted on the belt will sit firmly in place and will not rock or slide around. This makes it slightly harder to thread some makes of holsters and pouches, but all types of gear will fit.

The Double-Alpha Competition Belt is available in Black, Blue, Red or Silver/Gray with the color boldly displayed in the wide middle section of the belt, not the trims.

Other features include:

- Top-quality material and workmanship.
- Industrial-strength Velcro of the highest standard.
- Both inner and outer belt have their size clearly tagged.
- Competition width 1.5", to fit with all shooting gear used.
- Overlap length is already calculated in – so if you are a size 36" pant – you order a size 36" belt.

- Sizes available from 32" – 50"
- Smaller sizes (32"-34") have an 18cm (7") overlap section, while larger belts (36" and up) have a 24cm (9.5") overlap section. This is to ensure the smaller-size users have enough space on their belts for all their magazine pouches.
- An attractive and functional safety loop is included with every belt, carrying an embroidered "AA" logo.

Size chart: Size Overall Length

32"	100 cm, 39.4 in.	42"	131 cm, 51.6 in.
34"	105 cm, 41.3 in.	44"	136 cm, 53.5 in.

Double-Alpha (DAA) Competition Mag Pouch

These new DAA mag pouches are made in South America by Jorge Sinardi, and we are very proud that Competitive Edge Dynamics is the exclusive North American distributor. We offer them under the DAA brand name in conjunction with our European joint-venture partner Double-Alpha Academy. These cleverly designed magazine pouches offer features very few others do and work perfectly with our new DAA Competition Belt:

They are compatible with ALL double-stack magazines, from small CZ type 9mm mags to full size STI mags. No parts are needed to change from one mag type to another – just move the rollers to the next holes and tighten up as needed! Couldn't be simpler. The magazines are completely ambidextrous – suitable for right and left hand assembly.

They offer an exceptional range of adjustment – see detailed description below. And they offer the very firmest grip as well as the smoothest release on the market, thanks to the double set of rollers and the flexible material used. You will find no better. Available in blue, black and red. **Specify color when ordering.**

DAACMP \$36.95

The DAA Competition Pouch is one of the very few in the industry to allow adjustment of the cant, thus allowing the magazine to be tilted closer or farther from your body.

A full 360-degree rotation is possible, allowing you to adjust the angle to the magazine in each pouch to best suit your needs.

The Base pad can be assembled onto the belt in two positions, thus allowing the user to choose if he wishes to mount the magazine higher or lower on his belt, with a 20mm variance.

Dillon HP1 Electronic Hearing Protection

The Dillon HP1 Electronic Hearing Protectors are the latest technology has to offer! Using advanced digital technology, the HP1 amplifies weak sounds while at the same time blocking out loud, harmful noise. The HP1 is designed to NEVER completely shut off, but instead compress harmful noise to a safe comfortable level. The HP1 transmits a high-quality, wide-frequency-range sound - not the hollow, "tinny" sound common with other electronic hearing protectors. Now with new Auto Shutoff circuitry.

(Specify Blue or Black color) HP1 \$135.00

Requires four AAA batteries (not included)

- Protection Rating NRR 21
- External battery compartment allows easy access to batteries as well as isolating the batteries and associated connections from the harsh, humid conditions that can exist inside the ear cup. Two AAA batteries in each ear cup provide 250 - 300 hours of service!
- Extra-deep, replaceable ear pads provide added protection and comfort by increasing the internal depth of the hearing protector.
- Separate segmented volume controls allow user to adjust volume independently for each ear.
- HP1 Hearing Protectors provide TRUE stereophonic sound.
- Auto Shutoff system prevents unnecessary battery drain.
- Double-sealed circuitry with silicone protection for use in humid environments.
- Collapsible for ease of storage.
- Available in Blue or Black color.

HP1 Replacement Hygiene Kit

Replacement Hygiene kit for the HP1 Electronic Hearing Protector, includes two ear pads and two inner foam cushions. If necessary, ear pads can be removed by simply unsnapping them from the ear protector cup. To re-install the ear pad, insert one end of the ear-pad base under the edge of the ear cup, hold it in place, then follow the edge around, snapping it into the ear cup as you go.

HPK1 \$9.95

Dillon HP2 Non-electronic Hearing Protection

The Dillon HP2 Folding Hearing Protector is comfortable to wear for extended periods and folds for easy storage when not in use. To use, simply adjust to a comfortable fit with ear cups completely covering your ears. The HP2 may be cleaned by wiping with a soft cloth moistened with warm soapy water.

(Specify Blue or Black color) HP2 \$19.95

- NRR 23
- Available in Blue or Black color

HP2 Replacement Hygiene Kit

Replacement ear pads and acoustic foam inserts are available in kit form. If necessary, ear pads can be removed by simply unsnapping them from the ear protector cup. To re-install ear pad, insert one end of the ear-pad base under the edge of the ear cup, hold it in place, then follow the edge around, snapping it into the ear cup as you go.

WARREN TACTICAL SERIES sight design is void of sharp corners, serrations, undercuts, and odd angles because they are distracting.

Notes on the Warren Tactical Series Rear - The patented, curved rear profile, called the "Waive Design," and the radius corners of the rear notch combine to quickly direct the shooter's vision upward toward the front sight and the target / threat.

The Waive Design also allows faster "target to target" transitions. Plus, with the long outer corners of the rear sight removed, the shooter can see more of the target / threat area clearly.

SEVIGNY COMPETITION / CARRY SIGHTS void of sharp corners, serrations, undercuts and odd angles because they are distracting.

Notes on the Sevigny Competition Rear - The patented profile of the Sevigny Competition Sight is a more traditional approach to sight design, but that's where similarities end. These sights maintain their sharp, crisp edges, which leaves no question whether you are on your target or not. The front blade width provides substantial visual feedback to the competitor, providing just the right light on either side to quickly verify your front sight is on the target. This combination allows the competitor to break the quick, accurate shot on either the wide-open or the partial, hidden target.

Notes on the Sevigny Carry Rear - Further collaboration between Scott Warren and Dave Sevigny produced the patent-pending, Sevigny Carry Sight. Dave advised that he wanted to see a consistent sight picture between his Carry Glocks and his Competition Glocks. The Sevigny Carry Design maintains the same sight profile as the Sevigny Competition rear sight, but with rounded outer edges to reduce drawing snags during carry.

Aimpoint Micro H-1 Red Dot Sight

Micro H-1 - This member of the Micro family of sights is designed and built with the competitive handgunner in mind. With its black metallic finish and its 105-gram weight, the Micro H-1 is perfect on pistols and revolvers for NRA Action Pistol or IPSC competition. With its 4 MOA dot size, the Micro H-1 is also ideally suited for use on hunting rifles.

Unique features for Micro H-1

- Its weight – 84 g without mount and 105 g with mount
- Ideal for rifles, shotguns, handguns or archery equipment.
- Integral Weaver-style base allows easy attachment.
- ACET technology allows 50,000 hours of operation on one battery.
- Available in 4 MOA (minutes of angle).
- Submersible to 15 feet (5 meters).
- 1X (non-magnifying) parallax-free optic.
- Patent-pending mount is keyed to the sight body to absorb recoil.
- Precision adjustment for windage and elevation. Top of protective caps fits into holes on adjustment screws - no other tool required.
- 13 settings for use in daylight and lowlight conditions.
- Color Black

Standard features for all Aimpoint® sights

- Unlimited field of view
- Parallax-free and unlimited eye relief
- Unaffected by extreme weather conditions
- Rugged, durable construction
- No hazardous materials
- No laser emission that could be harmful to your eyes
- Mechanical switch for speed and reliability
- Increased aiming confidence

AIMMR1 \$560.00

DAA Aimpoint Micro Sight Mount

The Aimpoint Micro Sight is a fantastic new scope, but few good pistol mounts are available for it – and none like this one! Designed according to Saul Kirsch's specifications, the DAA Aimpoint Micro Sight Mount will place your Aimpoint Micro Sight much lower down to the slide and get that large battery cap out of your way by rotating the sight 90 degrees to the left. It thereby places the battery compartment on top rather than off to the right. The mount attaches directly to the body of the sight without the use of the originally supplied dovetail mount, thus reducing bulk and obstruction of view. Available in STI or Tanfoglio model in Silver or Black color.

DAAMAM \$99.95

Double Tap C-MORE Sight Mount

This is the original Double Tap Scope Mount as designed by a four-time Canadian and nine-time Ontario Provincial Shooting Champion, Michael Auger. If you want the best, then do not settle for anything less than the original!

Available for STI/SVI in Silver or Black, and for Tanfoglio in Silver only. Please specify model when ordering.

- CNC machined from aluminum extrusion with replaceable Stainless blast shield
- Rides low and is superstrong
- Moves scope back 1/2" to clear Hybrid ports
- C-MORE windage screw is fully supported
- Two-sided leg attachment makes the scope mount the strongest on the market
- Competition tested for over 6 years
- Will not shift zero, flex or bend under recoil
- Included Spacers fit any wide or single-stack frames
- C-MORE hole spacing

DTCMSM \$115.95

C-MORE RTS & STS Small Tactical Sights

The RTS & STS C-MORE Systems are the smallest reflex sights. Just like our competition sights, their head-up displays provide an unobstructed sight picture in which the red dot hovers on the sight line, illuminating the point of impact on the target, creating the fastest target acquisition in existence, and unlimited eye relief. Similarly they use a beam-splitter lens made of glass; hard coated for maximum scratch resistance, and light transmission, while the parallax-free design enables targets to be acquired without the need to center the dot in the lens.

RTS \$419.00

They both use a CR2032 lithium battery that is contained within a removable battery tray, which permits battery replacement without dismounting the sight. The battery tray is O-ring sealed, and is part of the waterproofing that goes into every STS. A 3-position switch provides automatic intensity adjustment; a high brightness setting; and an off position.

The aircraft alloy housing and electronics are designed to handle the hottest loads from large-caliber firearms. The RTS provides 1 MOA click adjustments for windage and elevation resulting in pinpoint accuracy. A positive locking screw for both windage and elevation lock the adjustment screws in position. The STS provides infinite adjustment capability; by eliminating "clicks," the adjustment can be set to exact positions, resulting in pin-point accuracy. A positive locking screw for both windage and elevation will lock the adjustment screws in position.

RTS has a built in railway mount and is only available with the built-in railway mount at this time. The STS come without a mount, but has a full range of mounts available as shown below,

STS \$399.00

- Small Compact Design
- Aluminum Body
- Glass Lens
- Removable Battery Tray
- Ultra-Bright Red Dot available in 3.5 and 7 MOA
- 3-position switch: Full Bright. Auto. Off.
- Precision Adjustments with Lock
- Available in Black or Desert Tan
- Water Resistant to 1 meter
- Mounts Available Separately

STSB-3.5 (STS Red Dot 3.5 MOA in Black or Tan color) \$399.00

STSB-7 (STS Red Dot 7.0 MOA in Black or Tan color) \$399.00

STSMT-050 (STS Adapter Plate) \$34.95

STSMT-070 (STS Doctor Adapter Kit) \$39.95

STSMT-110 (STS Dovetail Mount - Glock Wide Slide) \$39.95

STSMT-115 (STS Dovetail Mount - Glock Narrow Slide) \$39.95

STSMT-200 (STS Rail Mount - Weaver / Picatinny) \$47.95

C-MORE Red Dot Sights

Built for speed, these High Performance red dot sights will take your shooting ability to the next level. By using a single red dot as an aiming point, target acquisition is as simple as point and shoot. The unique Heads-Up-Display (HUD) design provides an unlimited field of view, while eliminating obstruction and tunnel vision common to tube-style scopes.

Serendipity

The Serendipity is a born competitor, winning the IPSC World Championship as a prototype before the first production model was ever produced! It features a super-light integral mounting system for the lightest setup.

Designed around the 1911 frame and competition race guns, the Serendipity started the heads-up revolution in shooting sports. In 1993 it was the first sight ever used in competition to incorporate a heads-up display or "tubeless" design. Since then the Serendipity has proven its performance and reliability with multiple National and World Championships, and continues to be the DOMINATING sight in competition today.

The Serendipity is available in many different models. The difference in each model is the intensity switch and the width of the mounting pads, which are machined to fit the width of the selected frame. With each model, you choose the color of the sight and the size of the dot. CED can special order most models, and we try to stock on hand the most popular colors and Dot MOA sizes.

Models & Applications

SL750 / CSL750 - Fits standard 1911 frames and clones including Colt, Springfield, Kimber, Para-Ordnance. Frame width = .750". Available in Black / Bodacious Blue / Gray / Radical Red. Choose from two different Red Dot sizes 6 MOA or 8 MOA. You MUST specify the color and dot MOA size when ordering.

SL750 (Standard Switch) \$209.95
CSL750 (Click Switch) \$259.95

Heads-Up-Display

The Heads-Up-Display provides an unobstructed field of view, while the integral mount increases accuracy and eliminates weight by uniting the mount and sight into one unit. This provides the fastest target acquisition in existence today.

Electronics

Unsurpassed in performance and reliability, C-MORE electronics have proven tough enough to handle the hottest loads from large calibers and full auto.

Diode Modules

Interchangeable diode modules allow the use of six optional dot sizes for different applications. These modules produce the brightest, clearest dot available, and extremely long battery life.

Adjustments

The C-MORE windage and elevation adjustments are designed to hold zero in the toughest environments by using positive locking screws which lock the adjustment screws in position.

Mounting

The Serendipity mounts directly to the frame by drilling and tapping six holes, three on each side. Although the Serendipity was designed for the 1911 frame, the dimensions of the mount allow it to be installed on other "select" frames as well. Check models for a complete list of approved frames.

SL830 / CSL830 - Fits standard width STI and Infinity (SV) Frame Width = .830". Available in Black / Bodacious Blue / Gray / Radical Red. Choose from two different Red Dot sizes 6 MOA or 8 MOA. You MUST specify the color and dot MOA size when ordering.

SL830 (Standard Switch) \$209.95
CSL830 (Click Switch) \$259.95

Railway Red Dot Sight

Definitely the most versatile C-MORE sight, the Railway mounts to all Weaver and Picatinny rail style scope mounts. The applications are unlimited and include Hunting, General Shooting, and Law Enforcement / Military.

The Railway sight quickly attaches to Weaver and Picatinny rail style scope mounts. This enables the Railway to be attached to virtually anything! Shotguns, rifles, handguns, revolvers, cross-bows, paint ball guns; these are just a few of the applications the Railway has seen. The sight can be easily detached and installed on other weapons, making it the most versatile in the C-MORE lineup.

Mounting

The Railway attaches to the Weaver or Picatinny rail by clamping. Most rail mounts have multiple cross-slots for mounting different accessories. The Railway mount has one fixed cross-slot and one adjustable, which allows the sight to be adjusted to fit most applications. Extra cross-bolt sets are available upon request.

Available in Black / Bodacious Blue / Gray / Radical Red. Choose from two different Red Dot sizes 6 MOA or 8 MOA.

RWB (Standard Switch Railway) \$209.95

CRWB (Click Switch Railway) \$259.95

Diode Modules

Interchangeable diode modules allow the use of six optional dot sizes for different applications. These modules produce the brightest, clearest dot available, and extremely long battery life. Available in 2, 4, 6, 8, & 12 MOA sizes

IMPORTANT - Select the Red Dot MOA size and insert your selection in the size / color section box of the order form.

C-MDM \$49.95

Specifications

- Dimensions - Length 5.35 in. (135.9 mm) / Width 1.25 in. (31.75 mm) / Height 3.35 in. (85.10 mm) / Weight 3.75 oz. (106.3 g)

- Misc. - Submerge Depth 200 m - Colors Black, Blue, Gray, Red

DAA C-MORE Mount

The new DAA C-MORE Sight Mount is actually 3-in-1. This unique and original design incorporates a C-MORE Slide Ride Scope mount with removable blast shield, a retractable single arm jet wing, and the DAA adjustable thumb-rest. ALL IN ONE. The low-profile mount just clears the top of a standard STI slide. A thick-cut aluminum sidewall and mounting plate ensure stability and rigidity. The thumb-rest is fully adjustable and the jet wing fold-out arm will support the gun off the table top - allowing for an easier fast grip. The folding arm locks open or locks closed and tucks away neatly alongside the scope, for easy storage and transport.

Made from Aircraft-grade aluminum.

Available in either clear or black hard Anodize finish. Specify C-MORE pattern mounting holes or without holes, for personal custom fitting. **DAACMM \$139.95**

DAA Adjustable Thumb-Rest

The new DAA Adjustable Thumb-Rest allows you to adjust both the angle and the position of your thumb-rest with just a turn of a screw! The benefits of mounting a thumb-rest on the pistol are well established, and many top shooters choose to use one on their competition guns. These are legal for both Open and Limited/Standard divisions, as long as the box restrictions are met.

The biggest problem, however, is deciding where exactly to mount the thumb-rest, and what angle will best suit your shooting grip. Once mounted, other thumb-rests are difficult or impossible to reposition, as the screw holes are already drilled into the frame. And why should you be limited to the elevation angle decided on by one manufacturer or another? No longer! You can now adjust your thumb-rest as you like, experiment, and readjust as often as needed. Our unique original design allows for unlimited adjustments within a range of about half an inch, and these adjustments can be done without removing the thumb-rest from the frame. You can adjust the paddle even as the base remains locked in place.

The DAA Adjustable Thumb-Rest is available with or without mounting holes. Our multi-holes pattern is designed to be a "drop on" fit to the C-MORE pattern (1st and 3rd hole) as well as to the Tanfoglio screw pattern (2nd and 3rd hole). Or, order it without holes to fit your particular needs. Precision machined from hi-grade aluminum, with stainless steel screws and nut, the DAA Adjustable Thumb-Rest is available with either a Clear or Black Hard Anodize finish. **DAATR \$69.95**

Quinn III C-More Mount

The Quinn Mount by Quinn Engineering leads the revolution of the "sideways mounted C-More." Quinn was the first, and still is the best option for this type of sight mounting. Quinn was pleased to have teamed up with Saul Kirsch and Double Alpha Academy. Saul had the idea of an integrated option for a thumb-rest/pedal. Quinn thought it was a great idea and had thought about working with another company, but was willing to team up with DAA and feels that they carried it off functionally and with style. The new Quinn III mount is manufactured by DAA and is the latest word in C-More mounting technology and design. The mount is machined from top-grade extruded aluminum to the tightest tolerances for a precise drop-on fit. A newly designed integrated adjustable thumb rest paddle has been added. The paddle can be fitted in any of 15 positions (3 horizontal options and 5 angle options for each), or can be left off entirely. The mount is available in Silver or Black, and includes laser engraved logos.

The mount is machined from top-grade extruded aluminum to the tightest tolerances for a precise drop-on fit. A newly designed integrated adjustable thumb rest paddle has been added. Q-101 \$115.00

DAA Aluminum Standard Base Pads

The DAA Aluminum Standard Base Pads are made of top quality aluminum, precision-machined to the tightest tolerances and hard anodized for extra strength and striking good looks. They fit snugly onto STI / SV/ Para / Bul tubes, allowing just a little bit of that required "wiggle." Spring tension is enough to keep the pad in place; however, a self-locking set-screw has been added for extra insurance. The pads will add at least 1 round or more to capacity.

The pad is hollowed out, leaving just the absolute minimum thickness to ensure strength and durability. Radiuses have been added to improve inner strength, and side-walls have been thickened to further strengthen the grooves where the base attaches to the tube. In fact - these bases are so strong, we are offering a "No-Nonsense" 5-year warranty!

Available in Black, Silver (with metallic blue tint), Blue, and Red.

The DAA base pad is also available in brass with a matte black finish, weighing a hefty 50 g, three times heavier than the aluminum version.

Aluminum - DAASBP (specify color) \$25.95
Brass - DAASBBP (Matte black only) \$34.95

DAA Fixed Jet Wings

Don't mind the wide wings on top of your C-MORE? Then the simple and durable DAA Fixed Jet Wings are exactly what you need! Precision-machined from aircraft-grade aluminum, this fixed-wing design not only looks smart, but is a product built to last. A hard-anodized finish helps prevent scratches and wear. The DAA Fixed Jet Wings replace the battery cap on your C-MORE sight, utilizing the original screws.

DAAFIXJW \$27.95

UPLULA™ Universal Semi-Auto Pistol Magazine Loader

Loads Pistol Magazines Fast, Protects Fingers & Thumbs

Hand-held loader from Maglula, fills standard centerfire pistol magazines quickly and easily, so you spend less range time loading mags and more of it shooting. Smooth, positive operation protects fingers and thumbs while you load hundreds of rounds painlessly—as fast as one round per second. Also lengthens magazine life by reducing wear and tear on feed lips. One size fits all; no inserts, spacers, or adjustments needed to change calibers. Hold the magazine upright with the bottom resting on a solid surface. Place the loader over the top of the mag, press down lightly while squeezing the lever to depress the follower, drop in a round, and work the lever quickly to push it into the mag. Repeat the process until the magazine is full. Constructed from tough, reinforced, black polymer. Locks closed when not in use, so it takes up minimal space in pocket or range bag. Fits single and double stack 9mm, .357, .40, 10mm, and .45 ACP magazines, plus some .380 mags. Will not load Glock 6-round single stack .45 caliber or Smith & Wesson 7-round single stack 9mm, or magazines with less than 8mm between feed lips.

SPECS: Reinforced polymer, black. Approximately 2 7/8" (7.3cm) long, 1 1/4" (3.2cm) wide, 3 1/4" (8.3cm) high. 2.3 oz. Fits single and double stack magazines from 9mm to .45 ACP.

UPLULAUML

Hold the UpLULA™ as shown! (right handed)

Maglula LULA™ AR-15/ M-16 Magazine Loader

The LULA™ loader & unloader is a military-quality personal magazine loader and unloader. It facilitates both loading of loose rounds into a magazine and unloading them out of the magazine. It does so fast, safely, comfortably and painlessly. Usable for tens of thousands of rounds.

Thumbs can get sore loading those last few rounds into a magazine, especially during long shooting sessions.

The LULA Magazine Loader for M16/AR-15 works with almost all M16/AR-15 mags, metal and plastic [5.56mm (.223) and 6.8mm magazines], with the exception of the HK 5.56 Steel Mags (SA-80 mags). It will work with these HK Steel Mags, but may slip away prematurely after some use. The LULA incorporates a lever device to aid in loading these magazines smoothly and efficiently.

LULAARL \$26.95

StripLULA™

M-16 / AR-15 Stripper clip magazine loader (Patents pending)

The StripLULA™ stripper clip loader is a military-quality personal magazine loader.

Benefits:

- Easily and quickly loads rounds from stripper clips
- Eliminates finger pain and injury
- Eliminates wear on feed lips
- 1/3 the size of similar loaders
- The plunger is not separable from the body of the loader; therefore it can't get lost
- Highly reliable in all weather
 - Durable reinforced polymer
 - Loads 30 rounds in 12 sec.
 - Ambidextrous
 - Pocket size, approx. 38gr (1.3oz.)
 - Usable for tens of thousands of rounds.

LULASTRP \$27.95

BabyUpLULA™ - .22LR to .380ACP

The Maglula BabyUpLULA Pistol Magazine Loader is a military quality pistol magazine loader constructed of a durable polymer. The Maglula BabyUpLULA will work with single stack magazines and no adjustments, inserts or spacers are needed. With this loader, magazines can be loaded in 1/3 the time of conventional loading. This means you can spend more time shooting and less time loading your magazines. The Maglula BabyUpLULA is a great time saver for pistol shooters.

Technical Information: Maglula BabyUpLULA Pistol Magazine Loader

Loads: .22LR, .25, .32, .380 ACP and single stack magazines of all manufacturers.

Weight: Approximately 35 grams.

Notes:

- Has a simple rounds' unloader feature
- Fits in hand and pocket

Magazines this loader will not work properly with:

- Converted 22 Magazines
- Wide-Bodied Magazines (Greater than 1/2")
- Magazines with a projecting side pin
- Browning BDA 380 ACP
- Beretta Cheetah 380 ACP
- Ruger Mark 1, Mark II, Mark III 22 Long Rifle
- Ruger 22/45 22 Long Rifle
- Ruger 10/22 22 Long Rifle
- S&W 22A/22S 22 Long Rifle
- Taurus PT138 380 ACP
- Walther P22 22 Long Rifle

BUPLULAUML \$33.50

Gripmaster

Your hands, wrists, & forearms are at the heart of handgun control. Grip strength is the very foundation of accuracy & weapon retention and is therefore the essence of success & survival.

Excellent conditioning of the hand makes a critical difference in your success with a handgun. Optimum strength, dexterity, & endurance all contribute significantly to your ability to hit the target consistently over time.

The patented Gripmaster is the only hand exerciser available today which enables you to isolate and develop each finger individually. And because each finger is operated by a completely separate system of muscles & tendons in the hand, wrist, & forearm, the only way to achieve optimum conditioning of the hand is with Gripmaster.

Develop and condition your forearms, wrists, hands, and fingers with the amazing Gripmaster. It will become an integral part of your conditioning.

Great hands make champions!
Gripmaster builds great hands!

Available in three color-coded models of graduated resistance. Must specify color when ordering

GRPMST \$13.95

Blue / Light Tension
(5 lbs per finger)

Recommended for the average woman's hand and men preferring more repetitions at lesser resistance.

Red / Medium Tension
(7 lbs per finger)

Recommended for the average man's hand and sports use.

Black / Heavy Tension
(9 lbs per finger)

Recommended for those requiring exceptional grasping power for martial arts, climbing, or weapon retention.

JP Fire Control Components and Kits

JP Trigger parts have quickly become the finest the industry has to offer. Used by many manufacturers for its superior functionality compared to traditional components, a properly installed JP trigger is the choice of serious shooters for any application. The only way to improve upon the performance and accuracy of the JP trigger is with other fine JP fire control components outlined below, including hammers and springs.

JP EZ Trigger™ System

The original JP Fire Control Kit has long been the benchmark for all single-stage AR triggers in terms of precision, reliability, durability, safety and longevity in the market. Now, JP has combined the versatility of their component parts with the convenience of a module in the new JP EZ Trigger™. This innovative new trigger can be installed in about five minutes without any gunsmith fitting or modification of parts. It really is the best of all worlds—a superb trigger job on par with our own professional in-house installation, the speed and ease of a module and the versatility of a components trigger.

The new JP EZ Trigger™ represents the best performance value and strikes the best compromise between safety, performance, value and mission-specific versatility. Once you try it, we know you will agree.

JPS3.5 \$9.95
JPS3.5T \$9.95

JP Rifle Compensators

JP Tactical Compensators - Bennie Cooley Signature Series

In response to rule changes regarding compensators on rifles for tactical match use, JP developed an all-new recoil eliminator design. Rifle compensators used for tactical matches such as the SOF, WC 3-Gun and USPSA Limited Class must meet the new 1" by 3" size. In addition, some people prefer a slimmer, more compact configuration in their rifle compensator but didn't have a worthy alternative. Since JP did not make a compensator like this, and most of the existing ones had serious performance issues, JP set about solving that problem.

Top professional shooter, Bennie Cooley contacted JP to develop a truly high-performance, match-legal tactical rifle compensator. With his valuable input, JP produced a design that maximizes the potential of the size limitation while maintaining nearly the same recoil reduction and neutrality that has characterized the original JP Recoil Eliminator. Bennie was fully impressed with the new compensator and has endorsed it as his choice for action rifle competition. All JP Compensators are SOF/Tactical/USPSA Limited legal.

Tactical compensator 1.0 X 2.25" tactical match legal size
(1/2x28 TPI, .750 attachment OD, matte black)

JP/VTAC Modular Hand Guards and Accessories

Beyond particular attention to safety, integrity, and precision, the design of the JP Hand Guard boasts unmatched user versatility and customizability of mounted components precision. Available to suit a variety of applications. To maximize the functionality of the JP Hand Guard System, JP offers a variety of attachable Picatinny rail pieces, ranging from 12:00 rails to modular segments.

New for 2010, JP XL Hand Guard at 15.5" long, it is 3" longer than the existing "long" hand guard. Developed in response to customer demand for a longer guard that would cover the gas block on a rifle length gas system.

Instructional DVD

GasGunBasics by JP

This DVD includes a wealth of information that will enable you to get peak performance from your self loader. It is produced and delivered by John Paul of JP Enterprises, Inc., the company considered by most to produce the "gold standard" of M-15 type self loading rifles.

All the things you need to know to live happily ever after with your gas operated rifle!
DVD-JPGGB \$29.95

JP Operating System Components

Whether for supreme competition or reliability, JP Bolt Carriers are the finest components available. The durable, easy-to-install JP gas blocks allow you to precisely tune your rifle's bolt velocity to function perfectly with varied ammunition loads or particular component setups that defy one-size-fits-all gas systems.

JP Bolt Carriers

Whether for supreme competition or reliability, JP Bolt Carriers are the finest components available.

Both the JPBC-2 and the JPBC-3 feature a 100% increase in bearing surface for smoother operation and improved alignment and lower wear in the upper receiver. Both are M15 semi auto configuration in the rear with the mil-spec longer cocking pad in the front for best reliability. This is hands-down the best designed and highest quality general purpose carrier on the market. Sold as carrier with installed key.

Bolt Carriers, Bolts & Buffers

Stainless full mass tactical carrier with QPQ (without buffer)

Stainless LMOS carrier with QPQ (without buffer)

Enhanced bolt assembly completion group

(includes firing pin, cam pin and retainer pin, .223)

JPBC-2 \$199.95

JPBC-3 \$199.95

JPBC-EB223 \$119.95

JP Adjustable Gas System

The JP Adjustable Gas System is an integral part of the "recoil management" system. Most rifles are over-gassed and the resulting bolt slamming effect is a very significant part of the felt recoil impulse, which impedes sight recovery. JP found that controlling the bolt velocity made for a much smoother shooting rifle. This easy-to-install gas manifold allows you to tune your bolt velocity to a particular load and optimize the feel of your rifle.

JP gas blocks also gives a very professional looking way to eliminate the front sight on flat top rifles as opposed to cutting off the existing front sight as a make-shift approach to that problem. Don't be confused by cheap imitators. There are a number of copies of JP products out now that are not as well made or are not adjustable. If it doesn't say JP on the side, forget about it.

JPS-OSC \$19.95

JPS-OSR \$19.95

JP Rifle Scope Mount

NEW! JP Enterprises JPFTSM-30/1 Rifle Scope Mount

The new JP flat top mounting system is extremely robust and returns precisely to zero if removed and replaced. It offers the most ideal compromise between height and forward offset to be used on typical low rail flat top receivers with Mil-std 1913 Picatinny rail systems with longer eye relief high end scopes such as the Leupold LRT series. The profile is also an exact match to the CTR-02 upper receiver for an added touch. Torx key is provided to tighten clamp screws. No unsightly levers or knobs on this mount as JP feels that most people don't really need a "quick detach" capability on their mount, but once set up would rather leave well enough alone. Manufactured to accommodate all 30mm scopes and includes a set of ring adapters that allow it to be used with 1" scopes.

One piece flat top scope mount for 1" and 30 mm scopes (30mm with 1" adapter) JPFTSM-30/1 \$179.95

JPoint™ Miniature Electronic Reflex Sight

With its tiny size and near weightlessness, the JPoint sight renders many others like it obsolete. Most any platform will benefit from the JPoint given our wide variety of accommodating mounts and accessories. (Will fit any pre-existing sight cuts or mounts for Tasco Optima™ or Fire Point™ sights)

JP EZ TRIGGER SYSTEM

The pinnacle of JP fire control engineering, the EZ Trigger System includes the full suite of our best-selling FC components revised and refined to yield an expert-level JP trigger setup in about fifteen minutes with nearly the same ease and convenience of a trigger module. But unlike a module, the EZ Trigger offers a fully customizable fire control system with mission-specific versatility while avoiding the inherent defect of the modular trigger concept—the one-size-fits-all approach to both shooters and receivers. See our website for a real-time demonstration of just how quickly you can achieve a professional JP trigger job for yourself at home.

Reverse Plug Retention Clip

This unique Steel clip designed to capture the recoil spring plug on 1911's using the reverse plug system. Replaces bent paper clips or small nails which are cumbersome to use. Slip the loop portion of this clip over the guide rod and slide until the end is positively engaged with the retention hole in the rod. This allows for a controlled release of the slide in disassembling a pistol by capturing the recoil spring until it is purposely removed. Disassembly becomes smoother, easier, and prevents mishaps. A perfect addition to the workbench, range bag, and cleaning kit. Buy several and always be prepared when the need arises.

RPRC \$4.95

Ammo Brass Collector

The Ammo Brass Collector is simply the BEST brass-picking (collecting) device we have seen or tested to date for centerfire metallic pistol and rifle cases, and shot hulls. This broom styled roller easily picks up spent brass from the range. Simply roll it over the ammo brass you want to pickup and it captures it within its wire cage. It works not only on hard surfaces, but in grass and dirt as well. Comes with a dumper device that can be attached onto any 5-gallon bucket (not included). Stick the point of the dumper into the Ammo Brass Collector cage, twist ¼ turn and the Ammo Brass Collector releases its contents. The Ammo Brass Collector will pick up handgun brass and anything with a diameter of 3/8" to 1". Works great with handgun caliber brass including - .380, 9mm Luger, .38 Special, 38 Super, .357 Magnum, 40 S&W, 10mm, .45 GAP and .45 ACP and rifle caliber brass .22-250, .223, 5.56 x 39, .243 Winchester, 7.62 x 39, 7.62 x 54, .308, .30-06 and .45-70. It will collect shotgun hulls as well. Great for clubs and range facilities.

P3 Ultimate Shooting Rest

CTK PRECISION was born out of the need for superior products at reasonable prices. The P3 Shooting Rest, Gun Vise, Vertical Foregrip and Monopods all give you more shooting time by maximizing your firearm efficiency. Improving accuracy and reliability in your pistols, rifles and shotguns will increase their value in the long run.

The P3 Ultimate Shooting Rest from CTK PRECISION is the most versatile shooting rest available. The P3 Ultimate Shooting Rest adjusts in seconds to perfectly fit all firearms. Features ridged square tubular construction, durable e-coat finish inside and out, solvent-safe padding, wide-base three-point leveling system, fully adjustable rear pad and front forearm rest, fine and coarse elevation adjustments.

P3USR1 Price \$125.00
(Ground shipping only)

P3 Ultimate Gun Vise

The P3 Ultimate Gun Vise from CTK PRECISION is the most versatile gun vise available on the market today. The P3 Ultimate Gun Vise fits all firearms. Features ridged square tubular construction, durable e-coat finish inside and out, solvent-safe padding, wide-base three-point leveling system, fully adjustable rear vise and front forearm rest, convenient slot for cleaning rod. The P3 Ultimate Gun Vise is a high-quality professional gunsmithing vise for a fraction of the typical cost.

If you are a serious shooter, the P3 Ultimate Gun Vise will be a great addition to your shooting equipment. This Gun Vise will hold any style of stock configuration. The P3 Gun Vise will dramatically improve your ability to perform firearm maintenance and clean your firearms. The P3 Ultimate Gun Vise works great for holding your firearm steady while boresighting.

P3UGV1 \$130.00
(Ground shipping only)

Universal Brass Catcher

Eliminate the need to pick up your brass and have more shooting time. Simply place the brass catcher next to your firearm and begin shooting. The brass will be ejected into the high-quality mono-rail net. Use it offhand, prone or from the bench. The Brass Catcher has a heavy-duty steel frame, with a durable E-Coat finish. A generous net opening of 16"x16" ensures your brass is caught. Base size: 12"x12". Total height: 19".

MagPul PRS Swivel Stud

Sling swivel stud for the MagPul PRS. The MagPul PRS Swivel Stud allows our P3 Ultimate Monopod and any quick-change sling swivel to easily attach to the MagPul PRS stock in seconds. PRS Rail cover will slip over swivel stud when rail is not in use. Once MagPul PRS Swivel Stud is installed no tools are necessary to install P3 monopod or sling. You will be able to remove rail cover and install the P3 monopod in seconds.

MAGPULSSUD Price \$12.00

AIRSOFT

The mystery of Airsoft goes back for more than 30 years. Designed and marketed in the US by major BB gun manufacturers, Airsoft was rooted as a new variant in BB gun manufacturing. In place of the air BB gun designed for hunting small prey, the Airsoft BB gun was designed for pure recreational applications. It was perfect for people who wanted to target practice or do indoor shooting with friends. It appeals to players who are not concerned about the high-power hunting of a BB gun or pellet gun. This is exactly where Airsoft BB guns fit in.

In many countries today, Airsoft has become an extension of IPSC and IDPA competitive sports. With clubs establishing courses of fire that resemble these sports, duplicating targets, poppers, and even timing competitors as is done with live-fire sports. Airsoft has become the ideal way to continue practice during the off-season winter months, while in the confines of one's own home. A perfect way to introduce children into the shooting sports! Fun & safe for the whole family!

CED is proud to introduce an interactive custom designed line of products perfect for clubs or individuals who want to enjoy the excitement and training benefits that Airsoft provides.

CED7000 Airsoft Version

The first of its kind, the CED7000 Airsoft timer is a "sound-activated" timer designed to record the sound of shots fired from 96+% of Airsoft brands on the market. Ideal for training, the CED7000 Airsoft timer has all the features of its big brother (CED7000), but includes a softer buzzer sound and a more sensitive microphone.

Now, practice as the real professionals do! Perfect for club competitions or groups. (The CED7000 Airsoft timer is NOT designed for live-fire use)

CED7000A \$119.95

CED LED Static Steel Popper

Standing 37cm tall (14.75") and constructed of 3cm thick steel plate, this fixed popper includes a dual LED light which alternates between yellow and blue each time it is hit! Adjustable sensitivity makes this popper a fantastic training device for a wide range of Airsoft, BB, and Pellet guns. (Three "AAA" batteries required – not included)

ASSP \$59.95

CED Falling Steel Popper

Standing 37cm tall (14.75") and constructed of 3cm thick steel plate, this falling popper can be set up as a forward or backward falling plate. Adjustable sensitivity makes this popper a fantastic training device for a wide range of Airsoft, BB, and Pellet guns. Does NOT come with LED lights.

ASFP \$39.95

CED LED Steel Stop Plate

15.3cm (6") diameter and constructed of 3cm thick steel plate, the CED LED Stop Plate includes two LED lights which alternate between yellow and blue each time it is hit! Each plate comes with a 3.5mm mono plug for connecting to a CED8000 timer. When connected, the stop plate sends an impulse signal to the timer each time it is hit, recording the time of each hit on the timer itself. Perfect for club matches where the timer is used to start the course of fire and the stop plate when hit ends it. The competitor's completed course time is then registered on the timer. Each stop plate includes a 7" long steel extension arm for attaching it to wood target sticks. Adjustable sensitivity makes this stop plate a fantastic training device for a wide range of Airsoft, BB, and Pellet guns. (Three "AAA" batteries required – not included)

ASSTP \$59.95

AIRSOFT

60' Shielded Cable

Designed specifically for use with the CED LED Stop Plate and the CED IPSC Target, this quality cable allows the user to place the targets up to 60' from the location of the timer.

ASSC60 \$19.95

IPSC Airsoft Targets

Smaller versions of the real IPSC targets, these custom-designed cardboard targets are smaller and thinner, allowing Airsoft BB's to penetrate them in the same manner as real bullets do on normal targets. Proportionately balanced, these traditional and classic targets give the user the same accuracy results they get when shooting real IPSC targets. Available in both traditional and classic designs. Sold in bundles of 50 targets each.

A. IPSCCT \$20.00 / Traditional
B. IPSCCT \$20.00 / Classic
(additional \$3.00 S&H applied)

IPSC Target Stand

Custom designed for CED, these heavy-duty, durable steel stands provide perfect spacing for Airsoft IPSC targets or our CED LED IPSC Steel target. Each stand (12" width) includes two end- and one-center mounted 1x2" furring strip holders for use with CED Airsoft IPSC targets or the CED LED Stop Plate. Each stand is drilled to allow for staking in windy weather conditions. (Wood furring strips not included)

TSTAND \$39.95

WARNING ■ PRODUCTS SHOWN ON PAGES 51 & 52 ARE NOT DESIGNED FOR LIVE FIRE USE. THEY ARE INTENDED FOR AIRSOFT GUN USE ONLY!

CED1911 Toolkit

The CED1911 Toolkit is designed to provide the necessary tools to completely disassemble Colt 1911 and many similar-style guns, such as Springfield, Para-Ordnance, Kimber, Auto-Ordnance, and others. The CED1911 Toolkit will also handle many of the "aftermarket" accessories used on these guns, including extended magazine catches, adjustable rear sights, and recoil spring guide rods.

Guns are expensive items, and most owners take pride in their appearance. Nothing will ruin the appearance quicker than screws damaged by ill-fitting screwdrivers. The CED1911 Toolkit has the optimum-sized tool blades, hollow ground to preserve the appearance of the screw while providing maximum torque to remove even the most stubborn screw. The handle of the CED1911 Toolkit houses six uniquely different precision-crafted tool blades, which remain secure in the handle at all times and therefore cannot be lost! Each tool arm locks into position in the center of the handle, providing almost 3 inches of unobstructed view and working clearance.

CED1911 \$19.95

Revolutionary 6-in-1 handy toolkit

- All you need to disassemble 1911 or similar-style guns
- Professional quality built to exceed U.S. Military specifications
- Change tool blades quickly and easily with a turn of the dial
- Fully integrated tool blades are permanently built into the handle
- Compact size for easy storage in your pocket, car, or range bag

SPECIFICATIONS

Precision-crafted tool blades are cold formed from tough aircraft-grade AISI-S2M chrome-vanadium-molybdenum alloy and extra hardened for long life. Ergonomically designed, high-torque handle, molded from rugged, fiber-reinforced composite material.

Nevco has been making IPSC Target stands and equipment for years and is a well-known brand name in the shooting industry. Now, Nevco introduces a new line of Airsoft Targets and stands, made of the finest materials and workmanship, and that complement our CED product line.

Airsoft Popper

This is an Airsoft version of the classic popper design in a 15-inch size. Composed of heavy-duty 16-gauge steel for long life, it measures 5x15.25x2.75", weighs just under 30 ounces, and features a deluxe "T-shaped" tubing base with a calibration screw and rubber bumper to cushion the fall. All hardware is 1/4 inch and zinc plated. This target will last a lifetime with even the fastest of Airsoft guns. **DO NOT USE WITH STANDARD FIREARMS!** **NEVAP \$39.95**

Airsoft Split Popper

This is our 15-inch-tall, 16-gauge popper split in half. Shooting each side separately is even more challenging than the whole thing, which in essence makes it two targets as well as being more difficult to hit. Both sides fall independently and feature individual calibration screws as well as dual felt bumpers to cushion the fall of each side. It measures 5x15.25x2.75" and weighs 37 ounces. The base is composed of one-inch-square tubing in an "H" type configuration. All hardware is 1/4 inch and zinc plated. The 16-gauge construction will stand up to a lifetime of shooting even with the most powerful of airsoft guns. Combine this popper with an array of others for a lot of fun. **DO NOT USE WITH STANDARD FIREARMS.** **NEVASP \$49.95**

Airsoft Folding Target Stand

This is our folding target stand downsized to fit the smaller 12x20 inch Airsoft paper targets. It measures 12.5x5.25x1.125" folded and weighs 37 ounces. This one folds flat for easy storage and transport, and it features a swing out stabilizer that does away with having to tighten loose thumbscrews. It also features 7/16 holes for ground spiking, but can also be used with sandbags. It is composed of 1x1x1/8 inch angle and 1x2x.062" tubing to accept 1x2 furring strips. Many shooters use these for standard firearm practice as well. These units can be used in this manner but are not designed to withstand bullet impact.

NEVAFTS \$39.95

Airsoft Dueling Popper

This is our 15 inch, 16-gauge popper times two! Great for shoot-offs, each popper falls independently when hit and when at rest lying flat, are overlapped to determine which popper went down first. All you have to do is see which one is on the bottom after the shooting stops to know who won! They feature individual calibration screws and a felt bumper to cushion the fall. The unit measures 8x15.25x2.75" and weighs 3 pounds. The base is composed of one-inch-square tubing in a uniquely curved "T" configuration. All hardware is 1/4 inch and zinc plated. The 16-gauge construction will stand up to a lifetime of shooting even with the most powerful of Airsoft guns. **DO NOT USE WITH STANDARD FIREARMS.** **NEVADP \$59.95**

Drive-In Target Stand

This is our "drive in-the-ground" version of our immensely popular target stand. No thumbscrews to lose, no sandbags to carry. This stand has a dedicated striking point so you won't beat it up. All you need is this stand and a hammer. Just drive it into the ground and you're ready to go. Downsized to take the smaller 12x20 Airsoft paper targets. It measures 12.5x14x3" and weighs 35 ounces. It features a spike and dedicated striking point for driving it into the ground. Like our other products, it is composed of 1x1x1/8" angle and 1x2x.062" tubing to accept 1x2 furring strips. Many shooters use these for standard firearm practice as well. These units can be used in this manner but are not designed to withstand bullet impact. **NEVADITS \$39.95**

Competitive Edge Dynamics has been designing, manufacturing, and marketing quality shooting products for over twenty one years. Leading the industry with professional shooting products, including CED timers, CED M2 Chronograph, Digital Scales, Hearing Protectors, Range Bags, and so much more! Our Guarantee.

**** 30-DAY MONEY BACK GUARANTEE ****

We want you to be completely satisfied with your purchase. If you are not pleased, we will be happy to give you a refund, credit, or exchange. Simply return the product to us with receipt of purchase and in undamaged condition.

**** LIMITED WARRANTY ****

Our Warranties vary in length from product to product, but all carry the same coverage.

If the product breaks due to defective parts or workmanship, we will replace it for you within the warranty period. This warranty does not cover any failures attributable to abuse, mishandling, failure to follow operating instructions, alterations, or accident. If you accidentally break it, we will repair it at cost for you. All claims should be accompanied by the original sales receipt or written proof of purchase, and be returned in a properly packaged manner with shipping charges prepaid. We are proud of our products and we want you to be too.

Returns or warranty service should be directed through your purchase location or directly to Competitive Edge Dynamics. If you should encounter any problems or wish to correspond on any matter, please write, e-mail, or fax us directly.

Barrel Wizard™ by Shooter's Choice

One of the most revolutionary new products to enter the shooting market in years, the "Barrel Wizard" is the most versatile shotgun-cleaning rod you can buy! A "Store-in-the-Barrel Shotgun Cleaning System", it will clean 12, 16, and 20-gauge firearms being compatible with all break-open, auto, pump and bolt action shotguns on the market. This dynamic new cleaning rod, stores in a 12-gauge barrel when traveling to a shoot or on a hunt. Constructed from aircraft aluminum, Delrin, and nickel-plated brass, it is extremely durable with a hard anodized finish. It is designed with a precision Snap-Cap handle with oil reservoir, a unique Patented paper towel holding tip device, and an adjustable 27" to 40" cleaning rod length that fits almost any shotgun you own.

The Patented revolutionary paper towel holding device, which allows a paper towel to be wrapped 360 degrees conforming to the barrel, cleans faster than loose-fitting patches. It saves time and money! The precision quality snap-cap handle includes a unique oil reservoir and is designed with a nickel-plated brass spring loaded end cap for safe dry firing. The Barrel Wizard, also converts into a sturdy chamber and choke tube cleaning tool by attaching the towel holder to the snap-cap handle. **BWV \$49.95**

The Aero Wings

The Aero Wings, designed by four-time World IPSC Champion, Eric Grauffel, is the answer to fast retrievals of your pistol from any flat surface. Any serious competitor knows how important it is to be able to retrieve your pistol fast, grip it properly, and obtain your sight picture effectively. The Aero Wings are aerodynamically designed to improve the speed in which the pistol is lifted off any flat surface regardless of how it is positioned. You'll be able to retrieve it faster, while obtaining a better grip, resulting in a smoother sight acquisition. Perform like a Pro, with the help of The Aero Wings.

Designed to fit any C-MORE Red Dot Sight, The Aero Wings replace the battery cover on the sight. Made of strong, durable GF30 fiber-reinforced polymer, The Aero Wings are available in solid black color only.

Exclusively imported to North America by Competitive Edge Dynamics USA. **AEROWINGS ~~\$49.95~~
Sale \$29.95**

Range Ready Cleaning Kit

The FIRST EVER truly universal cleaning kit for IPSC / IDPA competitors and all pistol users. The CED/DAA Range Ready Cleaning Kit includes everything needed for calibers ranging from .22, 9mm/.38 Super, .40 / 10mm, and .44/.45 Cal. Designed to fit comfortably into your range bag, the Range Ready Cleaning Kit opens to reveal a custom 14" x 17" cleaning mat built right into the kit itself. The mat itself, made of durable PVC material, is the perfect workstation for your field repairs and pistol cleaning needs. The non-slip surface prevents parts from getting lost and is easy to wipe clean after use. When finished, simply fold and zipper close. The entire Cleaning Kit measures only 8" x 12" x 1.5" and easily stores away inside your CED Professional Range Bag or Shooter's Back Pack.

The Range Ready Cleaning Kit comes packed with custom features and tools. Included are all the brushes and swabs needed for proper gun care, two utility brushes with storage cases, a custom two-head brass / nylon hammer, a custom hex key set in both metric and standard sizes, a 4-bit custom screwdriver set, a plastic storage case for storing brushes & parts, a custom steel punch set, a stainless steel double-head cleaning tool for tough-to-reach areas, cleaning rod with patch loop tip, cotton cleaning patches, wired extractor/firing pin cleaning strips, & a 0.5 oz bottle of the famous Shooter's Choice FP-10 lubricant, all designed specifically to fit into our compact, convenient and very functional cleaning kit. An extra clear plastic zippered storage pouch has been included for essential replacement parts you might want to keep close on hand.

The Range Ready Cleaning Kit is the only pistol cleaning kit you will ever need again. At \$110.00 when purchased separately, the CED/DAA Cleaning Kit is an exceptional value at \$69.95.

Dimensions closed: 8"H x 12"W x 1.5"D
Dimensions opened: 16"H x 17"W x 0.75"D
CEDDAACK \$69.95

The Only One-Step Concentrated Solvent Needed for Cleaning and Conditioning Handguns, Rifles and Shotguns!

Removes All Types of Fouling:

- Powder
- Lead
- Plastic shotgun wad fouling
- Carbon
- Copper

MC704 \$9.95

(4 oz. Wide-mouth jar)

Advantages:

- Safe, quick and easy
- Conditions bore for impact accuracy on first shot
- Seasons bore to resist fouling buildup
- Non-abrasive – harmless to the bore surface
- Maintains accuracy in new firearms
- Restores accuracy in old firearms
- Prolongs barrel life

SHOTGUN AND CHOKE TUBE CLEANER

Designed Specially to Remove Fouling from Barrels, Choke Tubes and Ports. Cleans Receiver and Trigger Assembly.

Advantages:

Guarantees A Full Consistent Shot Pattern By:

- Removing plastic wad fouling
- Lead shot fouling
- Powder fouling
- Carbon buildup in operating mechanism

- Assures an even shot pattern
- Protects against rust, pitting and corrosion
- Minimizes malfunctions
- Safe, quick and easy
- Reduces recoil

SG012 \$12.95 (12 oz. Aerosol)

FP-10 LUBRICANT ELITE

The Additive MT-10 Metal Treatment Dramatically Increases Lubricity Between Moving Parts, with No Buildup or Changes in Tolerance.

Temperature Operating Range:

- -76°F to +500°F

Advantages:

- Used by U.S. Special Forces
- Outperforms Teflon® based products
- Reduces friction and wear
- Protects against metal damage
- Eliminates most malfunctions

Recommended Uses:

- Firearms
- Auto
- Sports equipment
- Fishing tackle
- Industrial
- Household
- Marine
- Shop

(4 oz. with applicator spout)

SSFPL005 \$2.95
(0.5 oz. Aerosol)

RUST PREVENT PRESERVATIVE / LUBRICANT

A Superior Anti-Oxidant Moisture Displacing Agent Engineered to Preserve All Gun Metals.

Protects Against:

- Rust
- Corrosion
- Fingerprints and body acids
- Pitting
- Salt air

Advantages:

- Displaces water
- Ultrathin film
- Penetrates
- Non-conductive
- Lubricates
- Prevents electrolysis

Recommended Uses:

- Firearms
- Auto
- Sports equipment
- Fishing tackle
- Shop
- Household
- Marine
- Industrial

RP006 \$7.50

(6 oz. Aerosol)

Berry's Preferred Bullet Puller w/ Collets Set

Berry's Preferred Bullet Puller w/ Collets Set is a simple way to remove bullets from cartridges. Perfect for disassembling improperly loaded ammunition or reclaiming brass and bullets from military surplus or other unknown ammunition. Sometimes, mistakes happen, so be prepared. It pays for itself by saving your components. Just drop in the loaded round and tap the Bullet Puller against a piece of wood to separate the bullet, powder and case. The rubberized grip is easy on your hands and the rubber insert in hammer tip is easy on your bullets. Hammer comes with 4 collets. **BPBP \$20.95**

CED Cleaning Patches

Premium-quality natural 100% cotton flannel patches to fill all your gun cleaning needs! These patches hold solvents, soak up crud and dirt and get oils into the grooves better than any other kind of patches made. (Not like the new, synthetic patches, which are less absorbent...they literally slide right over the fouling!)

Each value-priced resealable pack contains 250 patches! No need to purchase huge bulk volume in order to save! CED Cleaning Patches are packed to save weight and space; perfect for hunting or shooting excursions.

Order the size that is right for you!

Size (250 pc. Pack)	Model#	Price
1.25" square (.22-.270 cal.)	CP125	\$4.95
1.75" square (7mm-.38/.357 cal.)	CP175	\$6.95
2.25" square (.40-.50 cal. + -20 ga.)	CP225	\$10.95
3" square (16-12 ga.)	CP300	\$13.95

Range Ready Cleaning Kit Accessories I

CED/DAA Phosphor Brushes

Medium: 7.5 x 5.25 x 1.75" MPMBM \$3.95

DAA Target Case

This new case is an answer to a problem many shooters are familiar with - targets rolling around all over the car! That, and not having a free hand to carry the targets, along with your range bag, ammo and other necessary gear. If you need to transport your own targets to the range - you will find this new bag a "must-have" item! The new DAA target case is made of strong 600D polyester textile material to ensure many years of service. The zippered main compartment is designed to hold 12 or more full size USPSA / IDPA targets. On the outer front size of the bag are three additional customized pockets designed to hold Target Taper / Deluxe Tape Applicators or similar devices, patches, tape, stapler, tools, or other supplies.

The DAA Target case is designed to hold everything you need for your targets, for setting them and patching them, in one, organized, practical and easy-to-carry customized case. The convenient, adjustable, shoulder strap and padded handle complete this bag, allowing you to keep both hands free to carry your heavier range bag and ammo as you

head off to the range for a good practice session.

Try the new DAA Target Case - and you will wonder how you ever managed without one!

DAATCASE \$24.95

Quick Patch Deluxe Tape Gun!

All the benefits of normal Target Tape Guns, with more! The CED Deluxe Tape Gun patches holes on targets faster and easier than humanly possible by hand. Extremely easy and fun to use! No need to worry about running out of patches while in the middle of a match! The CED Deluxe Tape Gun will handle most brands of full-size patches available on the market today. No custom patches needed for this one! Increase efficiency, save time, and have lots of fun. Simply squeeze, release, and apply! Easy to aim, easy to use, and easy to load! The CED Deluxe Tape Gun has it all!

DTG \$79.95
Purchase a three-gun package and SAVE!
DTG-3 \$215.95

CED Brass Mat

Tired of searching for your spent brass cases in the grass, or dirt, or having the wind blow a sheet or tarp away along with all of the brass cases it was collecting? Now, the CED Brass Mat solves the problem! Designed of waterproof mesh material that allows moisture and dirt to pass through it, the CED Brass Mat collects brass cases as they are ejected. With custom-designed weighted corners, the CED Brass Mat remains firmly in place until it is

time to retrieve your brass. Easy to clean; simply wash with warm soapy water and air dry. Measuring 54" x 72" and constructed of PVC webbing material, the CED Brass Mat is the perfect choice!

BM \$36.95

CED Knee Pads

Competitive shooting often requires fast maneuvering on stages of fire where dropping to one's knees, bending under low fixtures, or going prone may be required. Protection of the knee area is vital in preventing injuries. CED and Double-Alpha Academy have teamed up in designing a protective yet very functional product for the competitive shooter today. The CED Knee Pad Set consists of two knee pads made with double layers of foam padding assembled into three sections, which in turn, allow flexible movement while providing a custom tapered fit. The CED Knee Pads can be worn over pants with easy attachment. No need struggling to get them over the shoes. The two adjustable straps attach quickly and

easily around the leg using Velcro straps. Easy on / easy off!
CEDKPAD
\$21.95 / pair

The CED Shooting Mat

The CED Shooting Mat is made of rugged durable 600D Polyester fabric, with heavy water-resistant PVC backing, dense EVA foam padding and a moisture-resistant bottom material. A large skid-resistant elbow pad provides excellent stability and comfort in use. A rolled flap can be extended to give an additional 1 ft. of protection for the barrel of the rifle. The additional flap helps prevent damage from moist ground or underbrush. The CED Shooting Mat features both a carry handle and shoulder strap and includes two tie straps with quick-release buckles. Available in solid Khaki or Camouflage – Specify color when ordering. **CEDSM \$62.95**

CED Pistol Bags

CED Pistol Cases provide densely padded protection to all types of pistols. Features handles for easy carry, four magazine pouches and a multi-functional storage pocket. Designed with a leather tab and metal D-ring for locking the case. Available in black or navy (Limited supplies of this color).

CED1400 \$23.95

CED Deluxe Pistol Bag

The CED1200 Pistol Bag features a dual shoulder / waist strap for protective carry, a zippered pocket for documents, and an inside holster design that prevents accidental fumbling or dropping of the pistol from the bag. Extra magazine pouch provides accessible storage for one double column or two single column magazines. Designed for pistols up to 6.25-inch barrel length and is suitable for most types of revolvers. NOT to be used with Optic sights attached. Available in black or navy (Limited supplies of this color).

CED1200 \$24.95

CED Waterproof Cases

CED watertight, dustproof, dent-resistant, shatter-resistant, virtually unbreakable cases are durable, strong and able to withstand some fairly extreme conditions. They are essential for keeping equipment secure and are a prerequisite for transporting or freighting delicate air cargo or protecting your valuable handguns. Each case is packed with multi-layers of eggshell and cubed foam to provide the best of both. For fast usage, simply place your pistol in the case and the eggshell foam will compress it in place. For longer journeys, where protection is vital to delicate scopes, camera equipment or other valuables, simply reverse the bottom foam layers to place the eggshell on the bottom of the case with the cubed layers on top. Then pull out the cubes as needed to the shape of the item to be stored and insert it for the ultimate protection during transport.

The tough, strong, durable PP material, used in these cases, makes them virtually indestructible. All cases contain a folding handle for easy storing, eggshell & cubed foam packing, locking feature for absolute security, purge valve to release atmospheric pressure, are stackable for easy storage, and have stainless steel hinge pins to prevent rust.

Compare sizes / prices and you will find that these CED waterproof cases offer the BEST value for both in the market today.

Now available in three sizes:

cubed foam (Extra-Large Case with retractable handle and wheels) \$99.95

CED Shooter's Back Pack -

Innovatively designed by shooters for shooters, this "hands-free" approach to shooting gear storage is the most functionally unique product to arrive in years!

The CED Shooter's Back Pack boasts a large center compartment for easy storage of gear. A removable pistol bag insert, wide padded shoulder straps, detachable zippered pouches ideal for magazines, sunglasses, or cellular phone storage, and rugged heavy-duty construction are all standard! Additionally, a water bottle, detachable brass bag, adjustable accessory straps, large-capacity magazine holders, and a zippered compartment for papers that includes calculator / business card and pen holders are all included!

To make this the one and only shooting gear bag you will ever again want, the CED Shooter's Back Pack adds even more great features. Each Back Pack includes a zippered ammo box compartment for easy access

to over 200 rounds of ammo storage capacity. And for

those frequent occasions on the range when there is no place to sit while waiting to shoot, each CED Shooter's Back Pack comes with its own removable portable seat neatly stored in a separate zippered compartment.

First Impressions of the CED/DAA RangePack Pro

By Ralf K. Jensen

Recently I received the new CED/DAA Rangepack Pro to test, and give my first impression of the product. As mentioned these are just my first impressions, as the Rangepack Pro hasn't been on the market long enough for me to do a long-term test.

I really like the design! It's overall shape is similar the old Guga Ribas backpack in that it stands upright and has a lower and upper compartment, but several features are definitely new, and it is also much bigger and with more functional features. The external material is quite rugged and I expect it will withstand a lot of abuse (time will tell). The zippers seem to be of the water resistant type and quite sturdy. And most importantly, they are lockable! And a small combination lock and cable is included with the Rangepack Pro (in addition to many other accessories).

Also a little clear plastic utility box is included with the CED/DAA Rangepack Pro, but this was much too small for my needs. My old CED XL range bag had 4 zipped pockets, where the Rangepack Pro has got only 3. This meant that I had to reorganize a little to fit my stuff in the Rangepack Pro. So I bought two plastic boxes (280 x 200 x 55 mm) with clear lids and small separated compartments inside to hold all my spare parts, tools, oil, etc. It fits perfectly in the bottom of the top compartment. Even the color is a match! Actually one extra box would have filled the bill, but I got two because that allows me to bring

even more stuff with me than previously.

The bottom compartment is incased by very thick (about 5mm), hard plastic walls. This is where you would transport your ammo and guns. This is good thinking because when packing a backpack it's essential to store heavy items as low and close to your back as possible. It is worth noting that this inner compartment can easily be removed, or rotated upwards. This will allow the bag to compress smaller – which would make it compatible with Airline carry-on size restrictions. A handy feature, as when the compartment is in place, the bag may be too deep to be used as a carry.

The shoulder straps and back of the Rangepack Pro are thickly padded making it comfortable to wear, even when fully loaded. With 900 rounds of .40, 2 guns, drinking water and all your stuff, carrying the Rangepack Pro sure is much easier than dragging a 20 kg regular range bag around. Even though it's got only 3 external compartments, there is no doubt that the Rangepack Pro will hold more stuff than the CED XL range bag – and in a more clever way. The Rangepack Pro includes a small chair, which actually is high enough to provide a decent resting position for me.

I have only found one thing I didn't like about the Rangepack Pro: The water bladder looks rather cheap and is thereby in direct contrast to the rest of the Rangepack Pro. But to be fair it actually does work OK but I just don't like the look and feel of it. The water bladder should tolerate from minus 20 to plus 50 degrees Celsius, so you should have the option of filling it 2/3's and storing in the freezer overnight. Only fill it to 2/3'rds because water expands when frozen. When you pack it in your Rangepack Pro next day you'll have cold water for a long time while the ice melts. If you don't wish to use the water bladder, you can use the side pocket to store a huge drinking bottle instead (I was able to squeeze in a 2 liter bottle).

There are a lot of well thought-out practical features in the DAA Rangepack Pro, just to mention a few:

- A clasp that allows you to pack away the shoulder straps (practical when flying)
- Top handle in nice quality for carry-

ing your DAA Rangepack Pro by your side

- Metal loops on the Rangepack Pro allow you to attach buckle strap clasps to carry extra stuff on the outside of the bag
- Small zipper compartment located on top holds a rain cover for when the rain gets really heavy. I actually tried the bag in rainy winter weather without the rain cover and the inside never got wet. So I'll only use the cover for heavy rain.
- One Buckle Strap Clasp is included with the bag (can be used to hold your competition rig). In my opinion you should buy an extra one, to prevent your rig from swinging.
- Red interior making it easier to locate your equipment

Would I recommend it? Absolutely yes!

In my opinion this is the best solution to "life on the range" available right now. It gives you a finished package that provides all you need – maybe except an umbrella, which most IPSC-shooters have at home. It has lots of practical features and after evaluating I can tell that a lot of thought must have gone into designing this product. Elements could

I can tell that a lot of thought must have gone into designing this product. Elements could be improved (water bladder, chair, more plastic boxes), but for \$199.95 this really is great value for money. This is in my opinion a product much better configured than the CED XL range bag and I can't imagine myself switching back to a normal range bag after trying this.

CED/DAA RangeCart Pro

If you have ever attended a match on a really large spread-out range, you will appreciate how handy and helpful a cart can be. Most shooters do tend to lug around a lot of gear and ammo to a big match...

The new CED/DAA RangeCart Pro was created from the ground up with the practical shooter in mind. It is designed to be the perfect companion product for our RangePack Pro backpack, but can be ideally used with practically any range bag owned.

Made of rugged top quality aluminum, with steel joints and hinges, and wide inflatable all-terrain tires, the RangeCart Pro can securely carry over 100 lbs. of gear anywhere you need to go!

Quick release assembly pins allow the cart to fold down in seconds, making it possible to pack into any moderately sized suitcase or the smallest car trunk. Even the wheels can be removed. You never need to leave it behind!

The 1680D fabric custom panel is as functional as it is attractive. The front top end features a fold-down ammo-shelf that is positioned high for easy access, and on which can be placed 100 rounds of ammo for loading magazines while standing comfortably. A great feature for those ranges where no tables are available. For added convenience, on each side of the fold-down shelf there is a magazine pocket, allowing two magazines to be loaded and stored while awaiting use.

Great features and function abound on the back-side panel as well! Below the rubberized grip handle is a generous sized insulated "lunch box" compartment, the perfect place for fruit, sandwiches or any other food desired, while out on the range. Below that are two large 1L insulated bottle holders, ideal for liquids, or personal items. The RangeCart Pro is designed to allow a large golf umbrella to be attached in the closed position, and then opened in a manner that will provide weather protection to the user and their equipment.

Weight: 3.5kgs (7.5 lbs)
Wheel-Base: 42cm (16.8")
Handle Height: 113cm (45.2")

The NEW CED/DAA RangePack Pro Backpack

The new generation of shooting backpacks has arrived and it is bigger and better than ever! No other comes close!

Competitive Edge Dynamics and Double Alpha Academy are proud to introduce the latest and BEST in this style of range bags!

Backpacks have a distinct advantage over traditional shoulder-strap bags as they distribute & balance the weight more evenly, making them more comfortable to carry over long distances (often the case on large IPSC shooting ranges). However, standard run-of-the-mill backpacks don't really cut it. While they may be comfortable to carry, most "Tactical" backpacks do not offer the features and design needed by competitive shooters on the range. Furthermore, they do not always remain upright when placed on the ground.

CED/DAARPBP \$199.95
(UPS Standard Ground Delivery only!)
(additional \$10.00 S&H applied)

The new CED/DAA RangePack Pro is functionally designed by shooting professionals from the ground up specifically for IPSC/USPSA, and IDPA shooters. It is an extra large backpack, chalked full of design features and accessories for the serious shooter.

The backpack is designed to stand upright on its rubberized waterproof base, allowing for easy access to all of its multiple compartments. Starting with the large lockable upper compartment, which includes a detachable 7-pocket magazine pouch. Additional pockets specifically designed for a mag-brush (included), hearing protectors, and a bottle of Fast Grip or to store the combination cable lock (included). There is even a pocket designed for the multi-purpose plastic utility box that also comes included. The structured cover of this upper compartment includes a zippered pocket for papers, business cards, and pens, as well as elastic straps for additional tools and accessories.

The back panel of the RangePack Pro is designed with dense padding to provide the ultimate support in all of the right places. The thick densely padded wide shoulder straps are contoured for the utmost in comfort and function even when packed with 20 to 40 pounds of gear or more!

For those wet rainy days on the range, the backpack includes a rain cover neatly stored away in a concealed pocket, always at hand when needed. The rain cover is designed to protect the backpack while being worn by the user giving access to the shoulder straps, even when covered.

The large lower compartment is encased in a hard plastic shell, giving the bag strength, rigidity, and structure. This lower compartment can easily be accessed through the large lockable front opening and can hold 500 rounds of ammunition plus 2 zippered pistol sleeves, or up to 1,000 rounds and 1 pistol sleeve. The compartment is even large enough to contain the CED medium size waterproof case!

Color: Black only
Weight: 3.4 kgs. (7.4 lbs.) excluding accessories
4.9 kgs. (10.8 lbs.) with all accessories included
Total Dimensions: 55H x 40W x 32D cm
